A Solution to Hose Kinks

Problem

The customer was having problems with multiple hose kinks on board coolant vehicle application. They were having to stretch and form connections due to the space restraints in the vehicle footprint. This raised concerns of leaks and wasted material.

Solution

Exotic's team met with the customer's design team to identify specifications of the current hose. Upon review, Exotic proposed the EZ Form Solution. The EZ Form Hose provides extreme flexibility for easy and quick installation of coolant, water, and oil suction/ return lines on mobile and industrial equipment. The EZ Form option was a perfect fit for this application as the routing on the vehicle was very complex.

Featured Products

EZ Form Series 7395- E-Z Form GS Greek Corrugated General Service Suction Hose is flexible hose designed for transfer of air, coolant, mild chemicals and water in industrial and mobile applications to 257°F and 75 psi, Series 7395

Success Factors	Customer Value
Exotic provided a product that is now the go-to hose for this customer and is spec'd in on this design.	The EZ form hose is much easier to route in a production setting, it does not kink, and it eliminates the forming needed on the past material.
