# Introducing SensoNODE Silver Sensors

Parker's next innovation in wireless sensors is SensoNODE Silver. They are different from SensoNODE Gold and Blue Sensors because they utilize cellular technology. This makes them perfect for applications where gateways are impossible or inconvenient. The data from the SensoNODE Silver is sent directly to the Voice of the Machine Cloud interface. For current cloud customers, Silver data can be integrated into existing Voice of the Machine cloud accounts. The first sensor being introduced is the SensoNODE Silver Pressure Sensor.
