Locking Blocking Venting Safety Valve

Problem

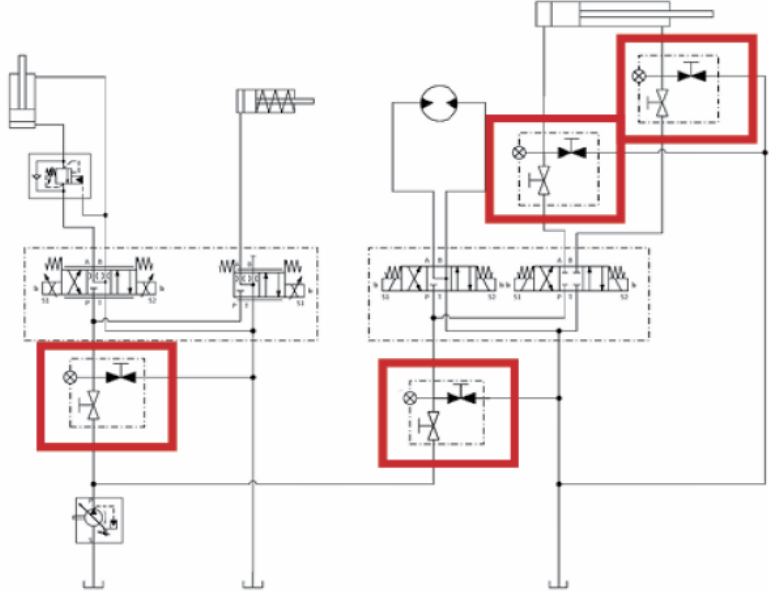

A large steel company was in search of a safety product for their hydraulic pressure hot mill. Specifically, they wanted a “block & bleed” valve that could be installed in sections of the mill.

Due to a lack of hydraulic safety products on the market, they struggled to find the right product for their application.

Solution

Exotic was able to source a custom products to fit the customer’s application needs, that they were unable to find anywhere else on the market.

By adding Exotic’s LBVV Safety Valve to their hydraulic pressure hot mill, they were able to ensure the safety of their employees during routine maintenance procedures.

Featured Products

Exotic LBVV Safety Valve – Assure the safe depressurization of your hydraulic system during routine machine maintenance with the Locking Blocking Venting Valve. The valve can be locked or tagged out in the closed position after the integrated bleed valve has been operated and the affected portion of the system has been depressurized.
