

Heavy Duty Hydraulic Cylinders

Series 2H / 2HD / 2HB & 3H / 3HD / 3HB

ENGINEERING YOUR SUCCESS.

Parker Hannifin's Cylinder Division offers products that are designed to meet and exceed the most demanding application requirements. Our extensive hydraulic cylinder product line offers OEM's and End Users cylinder solutions that provide value through reduced maintenance, increased productivity, and long service life. Parker Cylinder's wide breadth of product encompasses NFPA, ISO, and Custom designed products in a multitude of configurations and sizes.

Series CHE

- 20 through 100mm Bore Sizes
- Stroke Lengths to 150mm
- Operating Pressure to 140 bar
- 4 Different Rod Ends Available

Series CHD

- 20 through 80mm Bore Sizes
- Stroke Lengths to 100mm
- Operating Pressure to 207 bar
- 4 Different Rod Ends Available

Series HMI

- Bore Sizes 25 through 200mm
- ISO 6020/2 Interchangeable
- 12 Standard Mounting Styles
- 210 Bar Hydraulic Service

Series VH

- 2.50" through 8.00" Bore Sizes
- 13 Standard Mounting Styles
- Larger Ports Than Standard
- 3,000 psi Hydraulic Service

Series 3L

- Bore Sizes 1.00" through 8.00"
- Removable Rod Gland
- 15 Standard Mounting Styles
- 1,000 psi Nominal Hydraulic Service

WaveScale

- Bore Sizes 2.00" through 8.00"
- LDT Feedback
- Integrated Manifolds Available
- Protective Covers Available

Custom Cylinder

- Bore Sizes to 42.00"
- Stroke Lengths to 70'
- Operating Pressure to 10,000 psi
- Third Party Agency Approval

Cylinder Accessories

- Traditional Cylinder Attachments
- Alignment Aids
- Stainless Steel Attachments

In line with our policy of continuing product improvement, specifications and information contained in this catalog are subject to change.

⚠ WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from the Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having expertise. It is important that you analyze all aspects of your application, including consequences of any failure and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

Offer of Sale

The items described in this document are hereby offered for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance are governed by provisions stated on a separate page of the document entitled 'Offer of Sale'.

Data

With annual sales of approximately \$13 billion in fiscal year 2015, Parker Hannifin is the world's leading diversified manufacturer of motion and control technologies and systems, providing precision-engineered solutions for a wide variety of mobile, industrial and aerospace markets. The company employs approximately 55,000 people in 50 countries around the world. Parker has increased its annual dividends paid to shareholders for 59 consecutive fiscal years, among the top five longest-running dividend-increase records in the S&P 500 index. For more information, visit the company's website at www.parker.com, or its investor information website at www.phstock.com.

Parker is Engineering

Fluid Power and application expertise provide customers the

opportunity to use us as an extension of their design teams. From new system design to improvements required for existing applications, Parker offers unparalleled engineering expertise. We'll help you develop cost saving, high performance solutions that provide value through increased productivity, improved machine efficiency, and reduced downtime.

Our design engineers utilize the highest quality materials and cutting edge manufacturing processes available to push the envelope for performance, value and reliability.

Parker components and systems are made to last. We offer complete system solutions for the following industries:

- Plastics
- Metal Forming
- Steel
- Press
- Off Shore Oil
- Forestry
- Mining
- Entertainment
- Flight Simulation
- Fatigue Testing
- Automation

Worldwide Supplier to Industrial Markets

Parker Hannifin is the world's leading supplier of motion and control technologies that include; motion control products, systems, and complete engineered solutions for industrial markets. Parker's broad and extensive breadth of product offer single

source capability with limitless possibilities. Our industrial product solutions range from state of the art stand-alone components to complete engineered systems that are designed to provide value and efficiency to all of our customers. Each component and system is backed up with superior application expertise and technical support that you would expect from Parker Hannifin.

Manufacturing Locations

Series 2H / 3H Design Improvements Increase Reliability

Class 1 service polyurethane rod wiperseal and o-rings as body end seals and rod gland static seal offer superior abrasion and extrusion resistance for longer service life.

High compressive strength non-metallic piston wear rings, that minimize tube scoring, are standard on all configured piston selections.

Cap cushion performance options are selectable as floating check bushing type for normal applications or solid orifice style for more demanding high speed and load operation.

Cartridge style needle valve with captive micro adjust screw for precision cushion tuning.

Washers under each tie rod nut prevent galling, ensuring correct tie rod pre-stress and pressure envelope integrity.

Steel head and cap blocks are precision size, finished on all sides and are bored and grooved for concentric alignment of mating parts.

Piston-to-rod connection is pre-stressed to maximize fatigue life. An o-ring on the piston ID ensures a leak free joint and anaerobic adhesive further secures the threaded connection.

One common piston is used for 4 piston seal styles. When changing operating conditions require a different seal style, the piston and rod assembly is unchanged.

One Common Platform – Three Construction Choices

Configurable Gland, Tie Rod & Non-Tie Rod Styles are all available when you need them.

Series 2H & 3H Tie Rod Style with Threaded Jewel Gland

Traditional Parker threaded Jewel gland construction with proven TS2000 rod sealing system. Industrial cylinder standard tie rod construction ensures head and cap remain in contact with tube ends to ensure leak free performance.

Advantages

- ✓ Rod gland serviceable, using gland and spanner wrenches, without disturbing tie rod torque
- ✓ High strength tie rod material with rolled thread for added strength

Series 2HD & 3HD Tie Rod Style with Bolt-On Gland

Bolt-on gland (see Gland Retention page for bore and mounting availability) with robust Tri-Lip rod sealing system. Industrial cylinder standard tie rod construction ensures head and cap remain in contact with tube ends to ensure leak free performance.

Advantages

- ✓ Rod gland serviceable, using a common hex wrench, without disturbing tie rod torque
- ✓ High strength tie rod material with rolled thread for added strength

Series 2HB & 3HB Non-Tie Rod Style with Bolt-On Gland

Non-tie rod style with bolt-on gland (see Gland Retention page for bore and mounting availability) and robust Tri-Lip rod sealing system. Head and cap are bolted to threaded body flanges.

Advantages

- ✓ Improved fatigue life compared to welded flange construction
- ✓ Easier to service than tie rod styles in long strokes
- ✓ Clean appearance improves machine aesthetics
- ✓ Lower weight in long strokes

Piston Sealing Solutions for the Most Demanding Applications

Piston Seal Technology For The 21st Century

Parker's new universal piston seal design addresses the performance balance between low pressure sealability, low friction, extrusion resistance and seal life.

One piston style is used for all piston seal and wear ring configurations and will suit all application requirements. A common piston design permits field changing of seal configuration or seal and wear band material without replacing costly machined components when variations in application parameters occur, such as fluid, temperature or duty cycle.

All piston options include dual non-metallic wear rings to provide maximum stability and bearing area for protection against eccentric loads.

Parker WearGard™ wear rings are internally lubricated for reduced friction and formulated for heavy-duty load-bearing applications.

Parker HP Polyurethane Piston Seal

The Parker HP energized bi-directional piston seal improves upon the low friction and long wear of lipseals by including excellent low pressure sealing performance. Specially formulated polyurethane is long wearing and abrasion resistant with running friction comparable to lipseals. An o-ring energizer ensures virtually zero leakage in low pressure applications. Also, pressure trapping that can result with energized lipseals is not possible with a single energized seal.

Parker's HP piston seal is an excellent choice for most industrial applications operating with mineral based hydraulic oil and is available in Seal Classes 1 and 4.

Parker KP Filled PTFE Piston Seal

The Parker KP bronze filled PTFE seal ring material has low running friction for accurate positioning in closed loop servo applications.

When combined with a fluorocarbon energizing ring the Parker KP seal is rated for 400° F and will increase service intervals in high temperature applications when compared to fluorocarbon lipseals.

By combining the Parker KP seal with other energizer o-ring compounds and wear ring materials, the KP seal offers excellent service in all Seal Class environments.

Selection Guide

Application Demand	HP Seal	KP Seal	RP Seal	WP Seal
Load Holding	Best	Good	Good	Best
Fluid Compatibility	Good	Best	Better	Better
Heat Resistance	Good (200° F Max.)	Best (400° F Max.)	Better (300° F Max.)	Better (250° F Max.)
Dynamic Friction	Best	Best	Good	Better
Breakaway Friction	Good	Best	Good	Better
Extrusion Resistance	Good	Better	Best	Good
Fluid Isolation	N/A	N/A	N/A	Best

Parker RP Thermoplastic Seal

The Parker RP step cut ring is made of self-lubricating, glass reinforced, thermoplastic and is o-ring energized. Unlike cast iron rings that bypass oil, the Parker RP seal provides drift free operation throughout the operating pressure range. This tough seal is fully extrusion resistant, even in the face of extreme pressure spikes, thus ensuring superior wear resistance in the most demanding applications.

Parker RP can operate up to 300° F and is compatible with Seal Classes 1, 2, 3, 4, 5 and 6.

Parker WP Mixed Media Seal

The Parker WP Mixed Media seal is designed for applications requiring different media on either side of the piston. This option is ideal when hydraulic oil is on one side of the piston and air is on the opposite side; and it can be equally effective when dissimilar fluids are on either side of the piston.

Superior low-friction bi-directional sealing is accomplished by combining an energized filled PTFE seal with a redundant elastomer seal. Energizer and redundant elastomer seal materials are available for compatibility with seal classes 1, 2, 3, 5 and 6. Note: WP piston seal groove is not universal in 1.50" bore.

Versatile Piston Rod Sealing Systems Deliver Dry Rod Performance

Parker offers the best performing and broadest selection of rod sealing options. Our TS2000 threaded Jewel Gland sealing system in Series 2H and Tri-lip Bolt-on Gland in Series 2HD / 2HB are proven anchors of the offering.

As the rod strokes out, its motion and friction dynamically flex the multi-sealing edges of the TS2000 (shown above) and the Tri-Lip rod seal to maintain their contact with the rod. This provides a cutting action to shear the oil from the rod, allowing the rod to pass out of the rod seal practically dry. Any oil film that remains on the rod is stopped by the inner lip of the Wiperseal and held between it and the rod seal.

On the return stroke any dirt or foreign matter collected on the rod is wiped off by the leading edge, or outer lip of the Wiperseal. At the same time, any oil which may be trapped between the Wiperseal and the rod seal is returned into the cylinder. In other words, we have an automatic check valve that prevents any appreciable amount of oil to leak past the seals, and then returns any oil that has managed to wipe by the rod seal.

Both the TS2000 Jewel Gland and Tri-Lip glands are easily removed for service without loosening tie rods and disturbing the pressure envelope. Material options for both glands allow compatibility with Seal Classes 1, 2, 3, 4, 5 & 6.

Low Friction Gland

The Parker Low Friction Gland is designed to minimize 'slip-stick' and 'chatter' in servo and 'dither' applications. Two unidirectional bronze filled PTFE primary rod seals and a bronze filled PTFE wiperseal minimize both breakaway and running friction.

Low Friction Rod Seals are available in both threaded Jewel Gland and Bolt-on gland styles for rod diameters 1.000" - 5.500" in 1.50" - 8.00" bores. They are

offered with Seal Classes 1, 2, 3, 4, 5, 6 & 8. Selection of the Low Friction Gland is with a code in the cylinder model number.

See Piston & Gland Friction page for comparative seal friction data.

Section A

Series 2H / 2HD / 2HB & 3H / 3HD / 3HB Heavy Duty Hydraulic Cylinders

Features and Benefits	2-3
Application Check List	4
Mounting Styles & Tips for Applying Them	5
2H & 3H Family Model Code / How To Order	6-7

The inside story on why Series 2H is your best choice in heavy duty hydraulic cylinders

Primary Seal – TS2000 Rod Seal is a proven leakproof design – completely self-compensating and self-relieving to withstand variations and conform to mechanical deflection that may occur.

Secondary Seal – Double-Service urethane Wiperseal™ wipes clean any oil film adhering to the rod on the extend stroke and cleans the rod on the return stroke.

Rod Gland Assembly – Externally removable without cylinder disassembly. Long bearing surface is inboard of the seals, assuring positive lubrication from within the cylinder. An o-ring is used as a seal between gland and head, and also serves as a prevailing torque-type lock.

Piston Rod Thread – Male rod end styles #4A and #8A are integral cut threads on the piston rod. Optional studded KK small male thread, for piston rod diameters 2.000" and smaller, is available by specifying rod end style #4H

Piston Rod – Medium carbon steel, induction case-hardened, hard chrome-plated and polished to 10 RMS finish. Piston rods are made from 85,000 to 100,000 psi minimum yield material in .625" through 4.000" diameters. Larger diameters vary between 57,000 and 90,000 psi minimum material, depending on rod diameter.

Ports – SAE "O" ring ports are standard.

Optional Ports – NPTF ports are optional at no extra charge. Oversize NPTF and SAE ports are available at extra charge.

Align-A-Groove – A $\frac{3}{16}$ " wide surface machined at each end of the cylinder body. Makes precise mounting quick and easy.

Steel Head – Precision finished on all sides; bored and grooved to provide concentricity for mating parts.

End Seals – Pressure-actuated cylinder body-to-head and cap o-rings.

Parker's Exclusive Stepped floating cushions combine the best features of known cushion technology.

Deceleration devices or built-in "cushions" are optional and can be supplied at head end, cap end, or both ends without change in envelope or mounting dimensions. Parker cylinder cushions are a stepped design and combine the best features of known cushion technology.

Standard straight or tapered cushions have been used in industrial cylinders over a very broad range of applications. Parker research has found that both designs have their limitations.

As a result, Parker has taken a new approach in cushioning of industrial hydraulic cylinders and for specific load and velocity conditions have been able to obtain deceleration curves that come very close to the ideal. The success lies in a stepped sleeve or spear concept where the steps are calculated to approximate theoretical orifice area curves.

In the cushion performance chart, pressure traces show the results of typical orifice flow conditions. Tests of a three-step sleeve or spear show three pressure pulses coinciding with the steps. The deceleration cushion plunger curves shape comes

very close to being theoretical, with the exception of the last $\frac{1}{2}$ inch of travel. This is a constant shape in order to have some flexibility in application. The stepped cushion design shows reduced pressure peaks for most load and speed conditions, with comparable reduction of objectionable stopping forces being transmitted to the load and the support structure.

All Parker Hannifin cushions are adjustable.

The Series 2H cylinder design incorporates the longest cushion sleeve and cushion spear that can be provided in the standard envelope without decreasing the rod bearing and piston bearing strengths.

Adjustable Floating Stepped Cushions – For maximum performance – economical and flexible for even the most demanding applications – provides superior performance in reducing shock. Cushions are optional and can be supplied at head end, cap end, or both ends without change in envelope or mounting dimensions.

Steel Cap – Precision finished on all sides; bored and grooved to provide concentricity for mating parts.

High Strength Tie Rods – Made from 100,000 psi minimum yield steel with rolled threads for added strength.

Cylinder Body – Heavy-wall steel tubing, honed to a micro finish bore.

Problem Solving Piston Seal Options – Parker's new piston seal designs address the performance balance between low pressure seal ability, low friction, extrusion resistance and seal life.

One-Piece Nodular Iron Piston – Two non-metallic wear bands that minimize tube scoring are standard with all seal styles. Piston to rod connection is pre-stressed to maximize fatigue life. An o-ring on the piston ID ensures a leak free joint and anaerobic adhesive further secures the threaded connection.

One Common Piston for 4 Seal Styles

Standard HP style with polyurethane piston seal – excellent for most cycling and load holding applications.

Optional KP style with filled PTFE piston seal – low friction, high heat resistance for cycling and load holding service.

Optional RP style with thermoplastic piston seal – superior extrusion resistance to extreme pressure spikes with drift-free performance.

Optional WP style mixed media piston seal – low friction primary seal with redundant elastomer delivers superior performance with dissimilar media on either side of the piston.

Application Demand	HP Seal	KP Seal	RP Seal	WP Seal
Load Holding	Best	Good	Good	Best
Fluid Compatibility	Good	Best	Better	Better
Heat Resistance	Good	Best	Better	Better
Dynamic Friction	Best	Best	Good	Better
Breakaway Friction	Good	Best	Good	Better
Extrusion Resistance	Good	Better	Best	Good
Fluid Isolation	N/A	N/A	N/A	Best

(1) When a cushion is specified at the head end:

- a. A self-centering stepped sleeve is furnished on the piston rod assembly.
- b. A cartridge style needle valve is provided that is flush with the side of the head even when wide open. It is located on side number 2, in all mounting styles except D, DB, DD, DE, JJ, and HH. In these styles it is located on side number 3.
- c. All cylinder bores utilize a slotted sleeve as a check valve.

Cartridge Style Needle Valve

(2) When a cushion is specified at the cap end:

- a. A stepped cushion spear is provided on the piston rod.
- b. A "float check" self-centering bushing is provided in 1.50" - 6.00" bore cylinders, which incorporates a large flow check valve for fast "out-stroke" action. 7.00" bore and larger cylinders utilize a springless check valve located and identified in the same manner as the head end.
- c. A cartridge style needle valve is provided that is flush with the side of the cap when wide open. It is located on side number 2 in all mounting styles except D, DB, DD, DE, JJ, and HH. In these styles it is located on side number 3.

Application Checklist

The following checklist should be used to select the best possible cylinder for a given application. Additional information can be referenced in the following pages to help assist in this process. In the event that you have additional questions or concerns, or if more information is required, please contact your local Parker distributor or our customer service representatives for assistance.

- 1. Establish the system requirements** Series 2H
 - How heavy is the load to be moved?
 - What is the nominal operating pressure of the system?
 - How far does the load have to move?
 - What is the speed at which the load will move?
 - What is the fluid type and the temperature to which the cylinder will be exposed?
- 2. Mounting Style** Pages 5 & 174
 - Determine the best mounting style for the application.
 - If your application requires a mounting style that is not exactly matched by one of our catalog offerings, we can supply the mounting you need. If the required mounting resembles one of our standards, specify that style, enter 'S' in the Special Modification field and provide a dimension drawing of your mount. Special mounting styles that do not resemble a standard style will be designated as style TX by the factory.
- 3. Cylinder Bore and Operating Pressure** Pages 164-165
 - Review the theoretical push and pull force for a given bore size to determine.
- 4. Piston Rod** Pages 176-178
 - Determine what rod size will be required to avoid buckling.
 - Determine if a single or double rod cylinder is required.
 - Determine the rod end style and rod end thread.
 - Will stop tubing be required?
- 5. Piston Seals** Pages VI and VII
 - Determine the best seal type for your application. All selections are high load style that include dual non-metallic wear bands straddling the piston seal.
 - **Parker HP** polyurethane piston seal can hold a load in position and is your best choice for general industrial applications utilizing mineral based fluids in Seal Classes 1 & 4.
 - **Parker KP** filled PTFE piston seal is our lowest friction and highest heat resistance (up to 400° F) offering that will hold a load in position and can withstand high load and is available in all Seal Classes.
 - **Parker RP** self-lubricating, reinforced, heat-stabilized thermoplastic piston seal has the highest resistance to extrusion in extreme pressure spike conditions, can hold a load in position and has long wear characteristics comparable to cast iron rings. RP seals are available in Seal Classes 1, 2, 3, 4 and 6.
 - **Parker WP** mixed-media piston seal is for applications requiring different media on either side of the piston and is ideal with hydraulic fluid on one side of the piston and compressed air on the opposite side. WP seals are available in Seal Classes 1, 2, 3, 5 and 6.
- 6. Cushioning** Pages 179-184
 - Determine if cushions are required to safely stop the load.
 - Determine whether optional solid cap cushion construction should be selected over standard floating cushion bushing style.
- 7. Ports** Pages 172-173
 - Select the best possible port size for a given speed requirement.
 - Select port position.
- 8. Piston rod and mounting accessories** Pages 132-139
 - Determine how you will attach the cylinder to the load.
- 9. Custom modifications** Pages 149-162

Mounting Styles & Tips for Applying Them

Extended Tie Rod Mountings – TB, TC, and TD

Application:

- Straight line force transfer
- Compression loads (push)
– use TC or TD
- Tension loads (pull)
– use TB or TD

Advantages:

- Ease of mounting in tight spaces
- Force is transferred along the centerline of the cylinder

Flange Mountings – J, JB, JJ, H, HB, and HH

Application:

- Straight line force transfer
- Compression loads (push)
– use H, HB or HH
- Tension loads (pull)
– use J, JB, or JJ

Advantages:

- Rigid base mounting due to large flange area
- Force is transferred along the centerline of the cylinder

Side Tap Mounting – F / Side Lug Mounting – C

Application:

- Straight line force transfer
- Can be used in compression or tension loads
- Thrust key and secure mounting area are vital

Advantages:

- Ease of mounting

Recommendation:

- Styles F & C should have a minimum stroke at least equal to the bore diameter

Pivot Mountings – BB, SB and SE

Application:

- Curved or arc line force transfer
- Can be used in compression or tension loads
- Movement in a simple arc
– use BB mountings
- Movement in a compound arc
– use SB or SE mountings

Advantages:

- Ease of mounting
- Design flexibility
- Self aligning (SB or SE)

Trunnion Mountings – D, DB, DD and DE

Application:

- Curved or arc line force transfer
- Can be used in compression or tension loads
- Compression loads – use DB or DD, DE mountings
- Tension loads – use D, DD or DE mountings

Advantages:

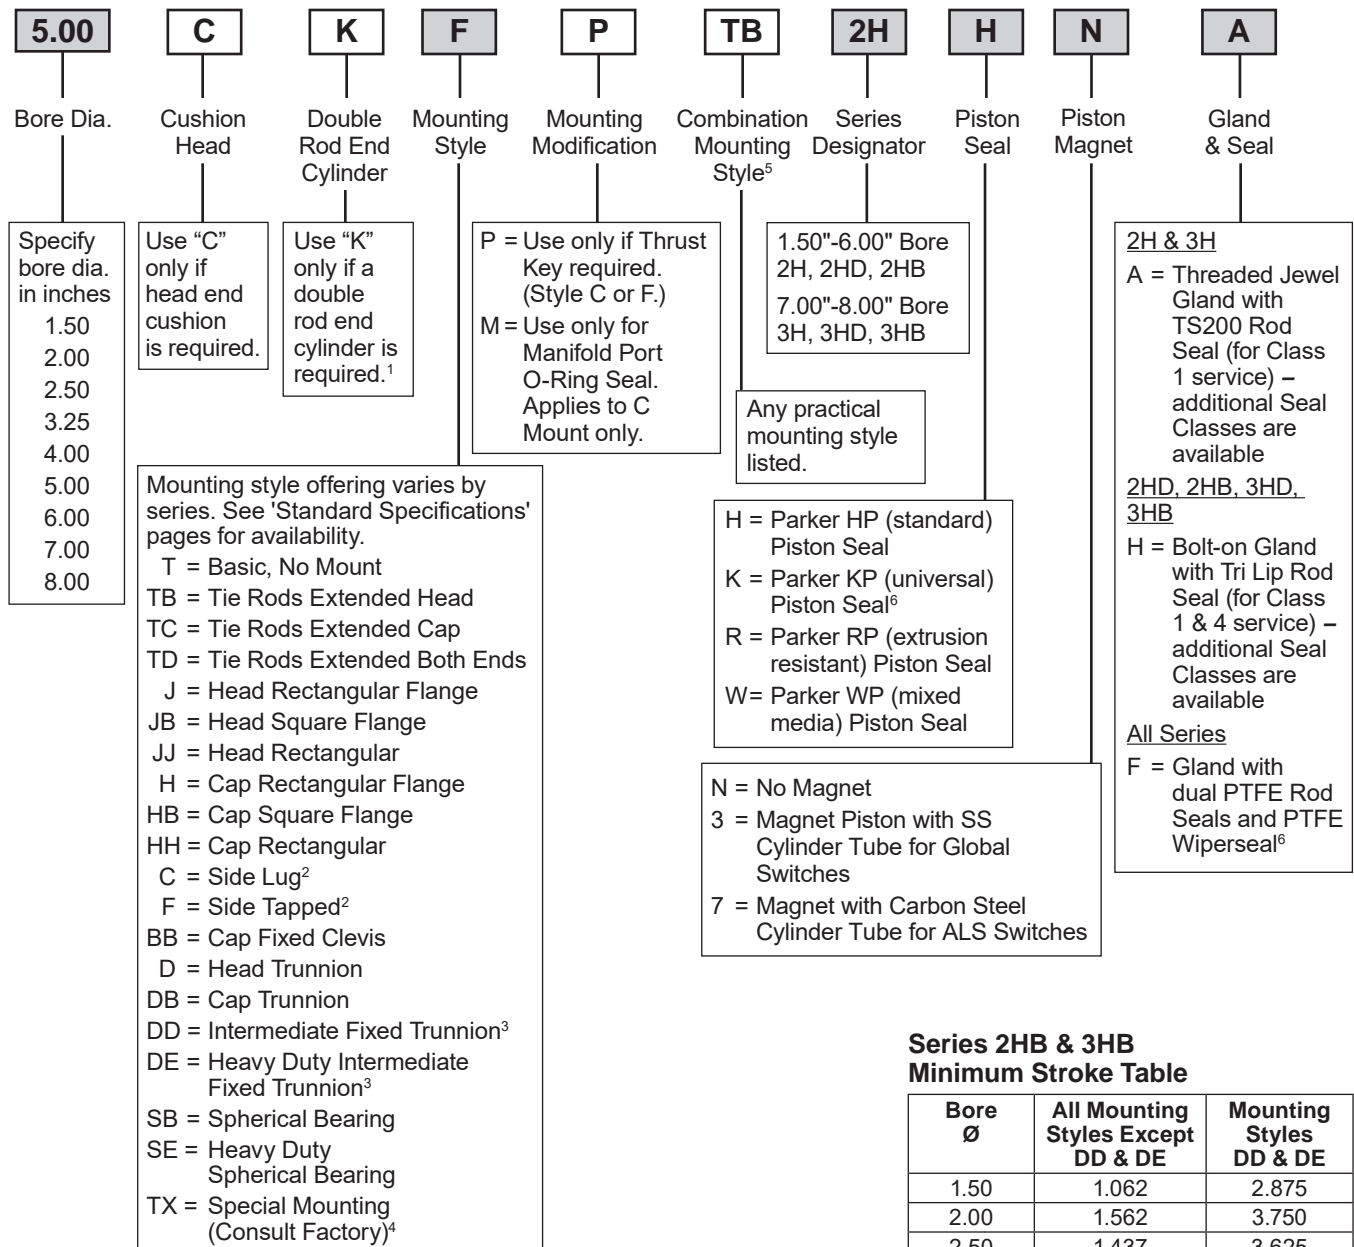

- Ease of mounting
- Design flexibility
- Self aligning

2H & 3H Family Model Code

Overview

A

Shaded boxes identify required model number fields.

¹ Available mounting styles for K Type cylinders are located at the end of Section A. When ordering a double rod end cylinder, the piston rod number and piston rod end threads are to be specified for both rod ends.

The model number should be created as viewing the primary rod end on the left hand side.

Example: K Type Cylinder:
4.00CKTD2HLT14A28AC10.000

² Mounting Styles C and F should have a minimum stroke length equal to or greater than their bore size.

³ Specify XI dimension.

⁴ Special mounting styles that do not resemble a standard catalog offering will be designated as style TX by the factory. See page 4 for instructions to enter a mounting that resembles a standard style.

⁵ In general, the model numbers as read left to right corresponding to the cylinder as viewed from left to right with the primary end at the left. The second or subsequent mountings are mountings called out as they appear in the assembly moving away from the rod end. Except when tie rod extension mountings are part of a combination, all combinations should have a "S" (Special) in the model code and a note in the body of the order clarifying the mounting arrangement. The "P", as used to define a thrust key is not considered to be a mounting. However it is located at the primary end.

⁶ Piston seal code K and Gland & Seal code F must be selected for Class 8 service. Dual PTFE rod seals with PTFE wiperseal not available for 0.625" rod.

**Series 2HB & 3HB
Minimum Stroke Table**

Bore Ø	All Mounting Styles Except DD & DE	Mounting Styles DD & DE
1.50	1.062	2.875
2.00	1.562	3.750
2.50	1.437	3.625
3.25	1.687	4.375
4.00	1.937	5.000
5.00	1.937	5.437
6.00	2.562	6.687
7.00	3.437	8.062
8.00	2.937	8.250

2H & 3H Family Model Code

Shaded boxes identify required model number fields.

⁷ Energized PTFE rod seals & wiperseal. All other cylinder seals are fluorocarbon. Not available for 0.625" rod.

⁸ S = Stop Tube. Specify: stop tube length, net stroke and gross stroke. Gross stroke = stop tube length + net stroke. Gross stroke to be placed in the model number field.

Example:

2.000 inches long stop tube
+14.000 inches net stroke
16.000 inches gross stroke

See tables on these pages for minimum allowable strokes for Series 2HB and Piston Rod End Styles 9 & 9B.

⁹ Refer to Rod buckling chart in Section H to assure rod number selected will not buckle under load.

¹⁰ Style 9 stroke restrictions may apply. See Style 9 Minimum Stroke Table for details.

¹¹ Provide dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

¹² Available only in combination with Style 4 or Style 8.

¹³ See Section G for detailed information regarding standard metric rod end thread sizes.

¹⁴ Must be specified for Piston Rod End Style 55.

Parker Series 2H 1.50"-6.00" and 3H 7.00" & 8.00" Bore Heavy Duty Hydraulic Cylinder

Series 2H 1.50"-6.00" and 3H 7.00" & 8.00" Bore cylinders set the standard for performance, durability, and trouble free operation. Parker's superior design, the use of high quality materials and stringent manufacturing practices provide all customers with long cylinder service life and reduced operating costs. Design features such as the "Jewel" rod gland, hard chrome plated piston rods, and stepped cushions provide increased machine productivity through reduced downtime, faster cycle times, and improved system efficiency. Every Parker cylinder is individually tested before leaving our plant to assure proper performance and leak free operation. All Parker Cylinder products carry an eighteen month warranty.

Select Parker Series 2H and 3H cylinders for your hydraulic cylinder requirements. Parker Series 2H and 3H will provide the value and performance you need for all of your industrial hydraulic application demands.

Parker "Jewel" Gland with TS2000 Sealing System

Standard Specifications

- Heavy Duty Service – ANSI/(NFPA) T3.6.7R3 - 2009 Specifications and Mounting Dimension Standards
- Standard Construction – Square Head – Tie Rod Design
- Nominal Pressure – 3000 psi¹
- Standard Fluid – Hydraulic Oil
- Standard Temperature – -10°F to +165°F²
- Bore Diameters – 1.50" through 6.00" (Larger sizes available)

- Piston Rod Diameter – 0.625" through 4.000"
- Mounting Styles – 19 standard styles at various application ratings
- Strokes – Available in any practical stroke length
- Cushions – Optional at either end or both ends of stroke. "Float Check" design is standard at cap end.
- Rod Ends – Four Standard Choices – Specials to Order

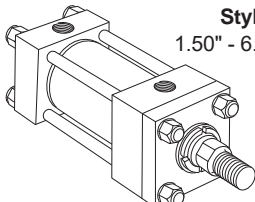

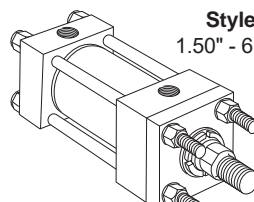

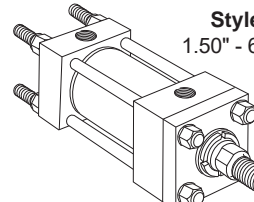

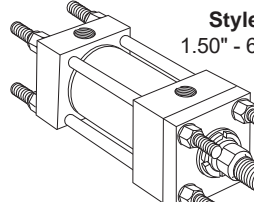

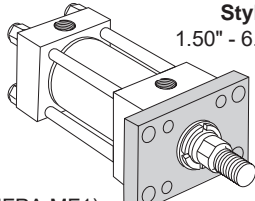

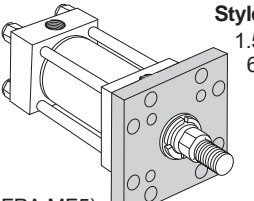

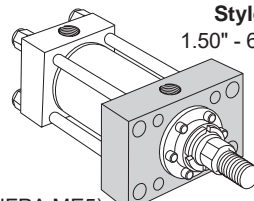

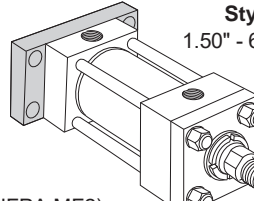

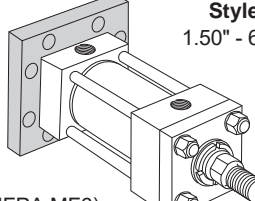

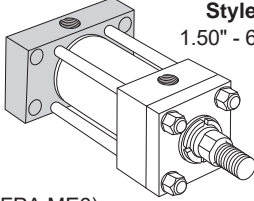

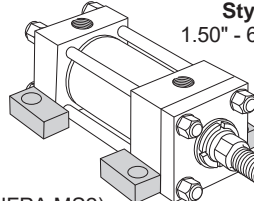

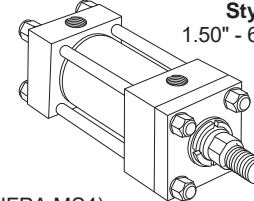

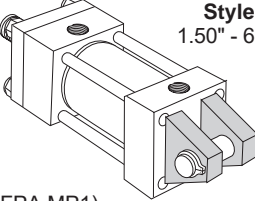

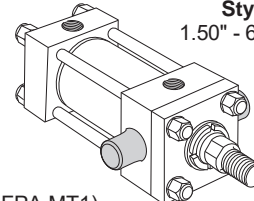

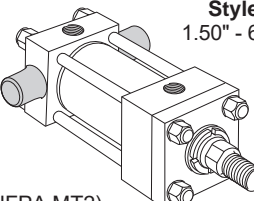

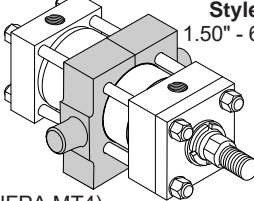

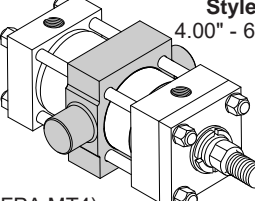

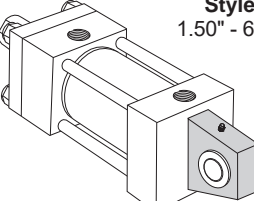

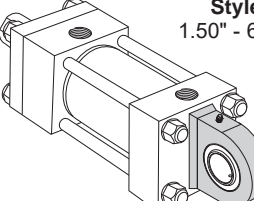

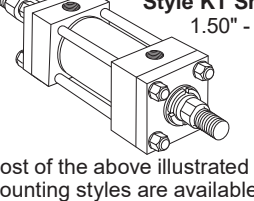

In line with our policy of continuing product improvement, specifications in this catalog are subject to change.

Note: Series 2H Hydraulic Cylinders fully meet ANSI/(NFPA) T3.6.7R3 - 2009 Specifications and Mounting Dimension Standards for Square Head Industrial Fluid Power Cylinders.

¹ If hydraulic operating pressure exceeds 3000 psi, send application data for engineering evaluation and recommendation. See Section H for actual design factors.

² See Section H for higher temperature service.

³ To match pin diameter in rod eye and cap, when an oversize rod is required, specify rod end style '3', 'CC' thread and 'A' thread length for the standard rod diameter (Rod No. 1 for the bore), and 'W' for the oversize rod. Order the rod eye and clevis bracket for the required bore size from the tables on the Style SE Spherical Bearing Accessories page.

Style SE – Recommended maximum swivel angle on each side of the cylinder centerline.

How to Use Double Rod Cylinder Dimension Drawings

To determine dimensions for a double rod cylinder, first refer to the desired single rod mounting style cylinder shown on preceding pages of this catalog. (See table above.) After selecting necessary dimensions from that drawing, return to this page supplement the single rod dimensions with those shown on drawing at right and dimension table below. Note that double rod cylinders have a head (Dim. G) at both ends and that dimension LD replaces LB. The double rod dimensions differ from, or are in addition to those for single

rod cylinders shown on preceding pages and provide the information needed to completely dimension a double rod cylinder.

On a double rod cylinder where the two rod ends are different, be sure to clearly state which rod end is to be assembled at which end. Port position 1 is standard. If other than standard, specify pos. 2, 3 or 4 when viewed from rod end #1 only. See port position information in Section H.

Notes

B
Series 2H
1.50"-6.00" Bore

Standard Specifications

- Heavy Duty Service — ANSI/(NFPA) T3.6.7R3 - 2009 Specifications and Mounting Dimension Standards
- Standard Construction — Square Head – Tie Rod Design
- Nominal Pressure — 3000 psi¹
- Standard Fluid — Hydraulic Oil
- Standard Temperature — -10°F to +165°F²
- Piston Rod Diameter — 3.000" through 5.500"

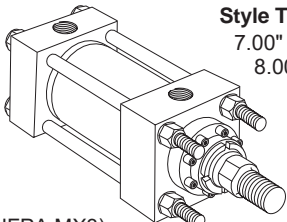

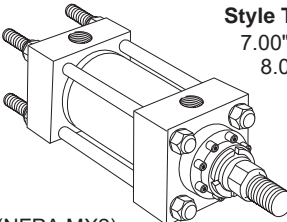

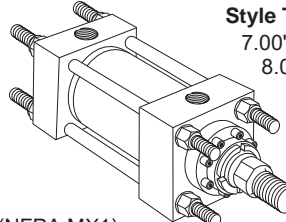

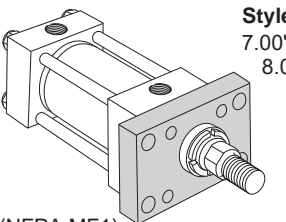

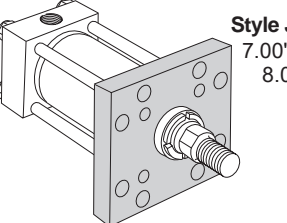

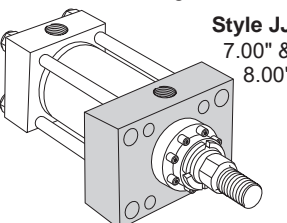

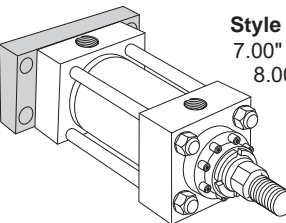

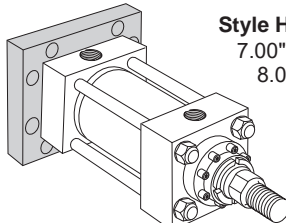

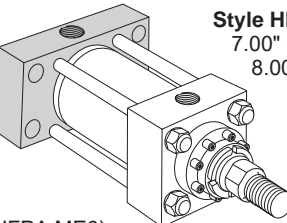

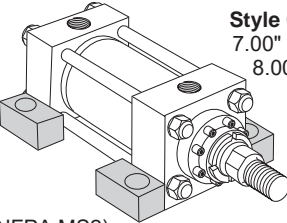

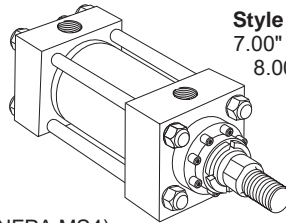

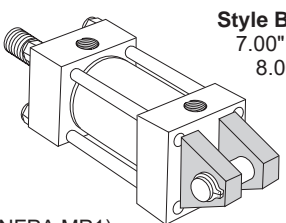

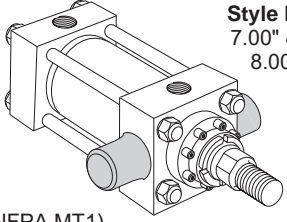

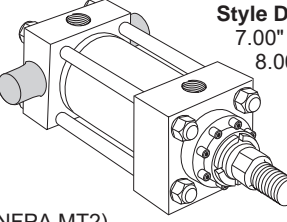

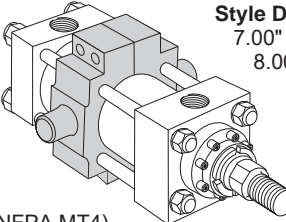

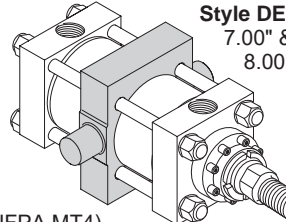

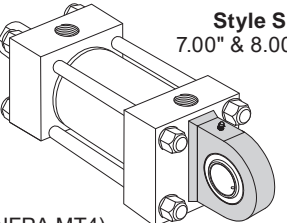

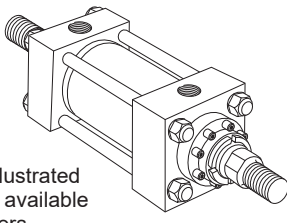

In line with our policy of continuing product improvement, specifications in this catalog are subject to change.

- Mounting Styles — 17 standard styles at various application ratings
- Strokes — Available in any practical stroke length
- Cushions — Optional at either end or both ends of stroke
- Rod Ends — Four Standard Choices — specials to order

¹ If hydraulic operating pressure exceeds 3000 psi, send application data for engineering evaluation and recommendation. See Section H for actual design factors.

² See Section H for higher temperature service.

“Special” Thread Style 3

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify “Style 3” and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

¹ For special WG dimension, specify “Style 3” and give desired dimension for WG. For other changes, place “S” in the model code, and describe rod end with dimensioned sketch.

² Style 9 stroke restrictions may apply. See Style 9 Minimum Stroke Table on How to Order page for details.

³ These piston rod numbers will have 4 spanner wrench holes instead of wrench flats. See rod drawings on page 117 for dimensions.

	5	5.000	4	4	9.50	6.38	16.75	25.25	21.25

⁴To match pin diameter in rod eye and cap, when an oversize rod is required, specify rod end style '3', 'CC' thread and 'A' thread length for the standard rod diameter (Rod No. 1 for the bore), and 'WF' for the oversize rod. Order the rod eye and clevis bracket for the required bore size from the tables on the Style SE Spherical Bearing Accessories page.

Style SE – Recommended maximum swivel angle on each side of the cylinder centerline.

Bore Ø	Head End Mounted		Cap End Mounted	
	Angle a	Tan. of a	Angle a	Tan. of a
7.00	3.00°	0.052	3.00°	0.052
8.00	3.00°	0.052	3.00°	0.052

Note: Dimension X is the maximum off center mounting of the cylinder. To determine dimension X for various stroke lengths multiply the distance between pivot pin holes by tangent of angle a. For extended position use $X = XL + 2X$ stroke.

¹ Connect load to piston rod without 'V' notch. If only one end of the Double Rod Cylinder is to be cushioned, be sure to clearly specify which end this will be.

² Specify XI dimension for Styles DD & DE from #1 rod end (without 'V' notch).

How to Use Double Rod Cylinder Dimension Drawings

To determine dimensions for a double rod cylinder, first refer to the desired single rod mounting style cylinder shown on preceding pages of this catalog. (See table above.) After selecting necessary dimensions from that drawing, return to this page supplement the single rod dimensions with those shown on drawing at right and dimension table below. Note that double rod cylinders have a head (Dim. G) at both ends and that dimension LH replaces LG. The double rod dimensions differ from, or are in addition to those for single

rod cylinders shown on preceding pages and provide the information needed to completely dimension a double rod cylinder.

On a double rod cylinder where the two rod ends are different, be sure to clearly state which rod end is to be assembled at which end. Port position 1 is standard. If other than standard, specify pos. 2, 3 or 4 when viewed from rod end #1 only. See port position information in Section H.

Parker Series 2HD 1.50"-6.00" and 3HD 7.00" & 8.00" Bore Heavy Duty Hydraulic Cylinders

Series 2HD 1.50"-6.00" and 3HD 7.00" & 8.00" Bore cylinders offer increased durability and ease of service with the addition of a bolt-on rod gland. The gland assembly is externally removable without cylinder disassembly. The rod seal has multiple sealing edges to produce "dry rod" performance and it is molded from a special polyurethane material that is extremely resistant to abrasion and extrusion.

Primary Seal – Polyurethane Tri-Lip Rod Seal is a proven leak proof design – completely self-compensating and self-relieving to withstand variations and conform to mechanical deflection that may occur. Alternative seal materials are available to suit your application.

Secondary Seal – Polyurethane Rod Wiper – wipes clean any oil film adhering to the rod on the extend stroke and cleans the rod on the return stroke.

Rod Gland Assembly – Bronze gland is externally removable without cylinder disassembly. Long inboard bearing surface is ahead of the seals assuring lubrication by cylinder operating fluid.

Parker Crown Wiper™ for Series 2HD 1.50"-6.00" and 7.00" & 8.00" bore 3HD – For environments that contain fine abrasive particulate specify the Crown Wiper option. The Crown Wiper is a proven superior alternative to piston rod end boots or metallic wipers that can ingest particulate. It has a sharp leading edge to effectively clean the piston rod and a beveled shape to prevent contaminant intrusion by channeling it away from the gland. It also acts as a secondary seal to wipe clean any oil film adhering to the rod on the extend stroke.

Standard Specifications

- Heavy Duty Service – ANSI/(NFPA) T3.6.7R3 - 2009 Specifications and Mounting Dimension Standards
- Standard Construction – Square Head – Tie Rod Design
- Nominal Pressure – 3000 psi¹
- Standard Fluid – Hydraulic Oil
- Standard Temperature – -10°F to +165°F²
- Bore Diameters – 1.50" through 8.00" (Larger sizes available)

- Piston Rod Diameter – 0.625" through 5.500"
- Mounting Styles – 19 standard styles at various application ratings
- Strokes – Available in any practical stroke length
- Cushions – Optional at either end or both ends of stroke. "Float Check" standard at cap end of 1.50" - 6.00" bore.
- Rod Ends – Four Standard Choices – Specials to Order

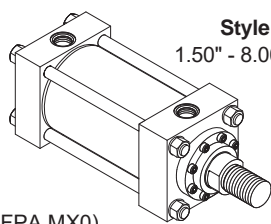

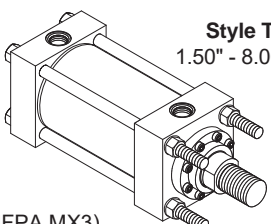

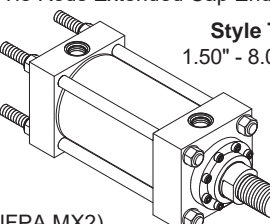

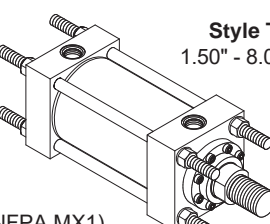

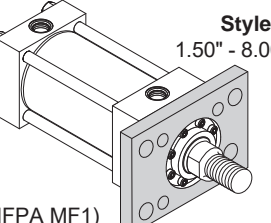

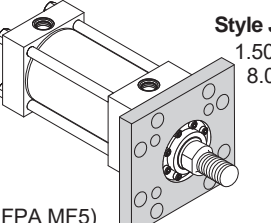

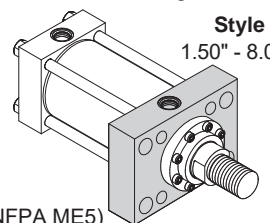

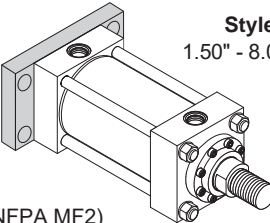

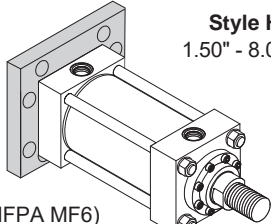

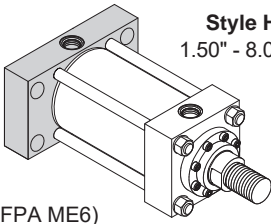

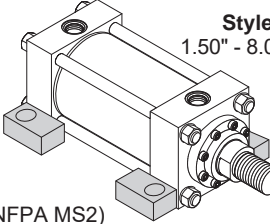

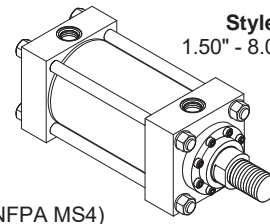

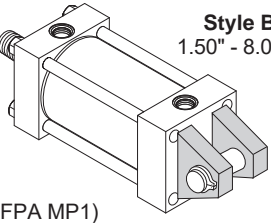

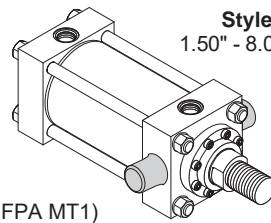

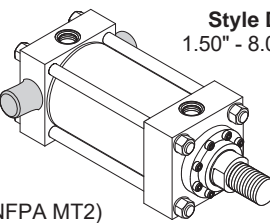

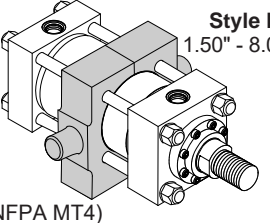

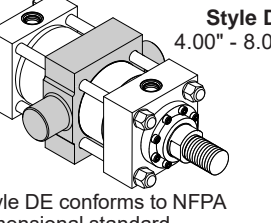

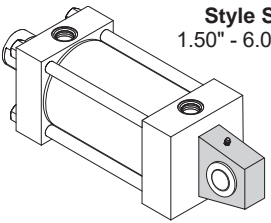

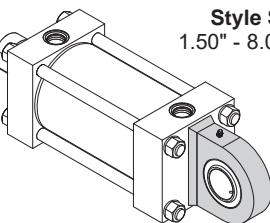

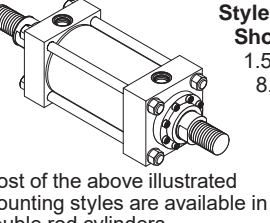

In line with our policy of continuing product improvement, specifications in this catalog are subject to change.

Note: Series 2HD and 3HD Hydraulic Cylinders fully meet ANSI/(NFPA) T3.6.7R3 - 2009 Specifications and Mounting Dimension Standards for Square Head Industrial Fluid Power Cylinders.

¹ If hydraulic operating pressure exceeds 3000 psi, send application data for engineering evaluation and recommendation. See Section H for actual design factors.

² See Section H for higher temperature service.

“Special” Thread Style 3

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify “Style 3” and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

Tie Rod Retained Gland

See Gland Retention page for styles that have this construction.

Rod End Dimensions – circular bolt-on retainer construction

See Gland Retention page to determine which bore, rod and mounting style combinations have circular bolt-on retainers and which have tie rod retained glands.

“Special” Thread Style 3

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify “Style 3” and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

¹ For special WG dimension, specify “Style 3” and give desired dimension for WG. For other changes, place “S” in the model code, and describe rod end with dimensioned sketch.

² Style 9 stroke restrictions may apply. See Style 9 Minimum Stroke Table on How to Order page for details.

Tie Rod Retained Gland

See Gland Retention page for styles that have this construction. (Dimensions on opposite page.)

³ To match pin diameter in rod eye and cap, when an oversize rod is required, specify rod end style '3', 'CC' thread and 'A' thread length for the standard rod diameter (Rod No. 1 for the bore), and 'WF' for the oversize rod. Order the rod eye and clevis bracket for the required bore size from the tables on the Style SE Spherical Bearing Accessories page.

Style SE – Recommended maximum swivel angle on each side of the cylinder centerline.

¹ Connect load to piston rod without 'V' notch. If only one end of the Double Rod Cylinder is to be cushioned, be sure to clearly specify which end this will be.

² Specify XI dimension for Styles DD & DE from #1 rod end (without 'V' notch).

How to Use Double Rod Cylinder Dimension Drawings

To determine dimensions for a double rod cylinder, first refer to the desired single rod mounting style cylinder shown on preceding pages of this catalog. (See table above.) After selecting necessary dimensions from that drawing, return to this page supplement the single rod dimensions with those shown on drawing at right and dimension table below. Note that double rod cylinders have a head (Dim. G) at both ends and that dimension LH replaces LG. The double rod dimensions differ from, or are in addition to those for single rod cylinders shown on preceding pages and provide the information needed to completely dimension a double rod cylinder.

On a double rod cylinder where the two rod ends are different, be sure to clearly state which rod end is to be assembled at which end. Port position 1 is standard. If other than standard, specify pos. 2, 3 or 4 when viewed from rod end #1 only. See port position information in Section H.

“Special” Thread Style 3

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify “Style 3” and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

¹ For special WG dimension, specify “Style 3” and give desired dimension for WG. For other changes, place “S” in the model code, and describe rod end with dimensioned sketch.

² Style 9 stroke restrictions may apply. See Style 9 Minimum Stroke Table on How to Order page for details.

³ These piston rod numbers will have 4 spanner wrench holes instead of wrench flats. See rod drawings on 3H Large Bore Piston Rod Ends page for dimensions.

Style 55 Rod End

	4	4.500	⁴	⁴	9.50	6.38	16.75	25.25	21.25
	5	5.000	⁴	⁴	9.50	6.38	16.75	25.25	21.25

⁴To match pin diameter in rod eye and cap, when an oversize rod is required, specify rod end style '3', 'CC' thread and 'A' thread length for the standard rod diameter (Rod No. 1 for the bore), and 'WF' for the oversize rod. Order the rod eye and clevis bracket for the required bore size from the tables on the Style SE Spherical Bearing Accessories page.

Style SE – Recommended maximum swivel angle on each side of the cylinder centerline.

Bore Ø	Head End Mounted		Cap End Mounted	
	Angle a	Tan. of a	Angle a	Tan. of a
7.00	3.00°	0.052	3.00°	0.052
8.00	3.00°	0.052	3.00°	0.052

Note: Dimension X is the maximum off center mounting of the cylinder. To determine dimension X for various stroke lengths multiply the distance between pivot pin holes by tangent of angle a. For extended position use X = XL + 2X stroke.

How to Use Double Rod Cylinder Dimension Drawings

To determine dimensions for a double rod cylinder, first refer to the desired single rod mounting style cylinder shown on preceding pages of this catalog. (See table above.) After selecting necessary dimensions from that drawing, return to this page supplement the single rod dimensions with those shown on drawing at right and dimension table below. Note that double rod cylinders have a head (Dim. G) at both ends and that dimension LH replaces LG. The double rod dimensions differ from, or are in addition to those for single

rod cylinders shown on preceding pages and provide the information needed to completely dimension a double rod cylinder.

On a double rod cylinder where the two rod ends are different, be sure to clearly state which rod end is to be assembled at which end. Port position 1 is standard. If other than standard, specify pos. 2, 3 or 4 when viewed from rod end #1 only. See port position information in Section H.

Series 2HB /
Series 3HB

Parker Series 2HB 1.50"-6.00" and 3HB 7.00" & 8.00" Bore Heavy Duty Hydraulic Cylinders

Series 2HB 1.50"-6.00" and 3HB 7.00" & 8.00" bore cylinders are envelope pressure rated at 3,000 psi across the entire bore size and mounting style range. Non-tie rod construction with bolt-on gland and robust Tri-Lip rod sealing system offer superior performance. Head and cap are bolted to flanges that are threaded to each end of the cylinder body and offer several lifetime ownership advantages.

- Improved fatigue life compared to welded flange construction
- Easier to service than tie rod styles
- Clean appearance improves machine aesthetics
- Lower weight in longer strokes

Primary Seal – Polyurethane Tri-Lip Rod Seal is a proven leak proof design – completely self-compensating and self-relieving to withstand variations and conform to mechanical deflection that may occur. Alternative seal materials are available to suit your application.

Secondary Seal – Polyurethane Rod Wiper – wipes clean any oil film adhering to the rod on the extend stroke and cleans the rod on the return stroke.

Rod Gland Assembly – Bronze gland is externally removable without cylinder disassembly. Long inboard bearing surface is ahead of the seals assuring lubrication by cylinder operating fluid.

Parker Crown Wiper™ for Series 2HB 1.50"-6.00" and 3HB 7.00" & 8.00" bore – For environments that contain fine abrasive particulate specify the Crown Wiper option. The Crown Wiper is a proven superior alternative to piston rod end boots or metallic wipers that can ingest particulate. It has a sharp leading edge to effectively clean the piston rod and a beveled shape to prevent contaminant intrusion by channeling it away from the gland. It also acts as a secondary seal to wipe clean any oil film adhering to the rod on the extend stroke.

Series 2HB / Series 3HB

Standard Specifications

- Heavy Duty Service – ANSI/(NFPA) T3.6.7R3 - 2009 Specifications and Mounting Dimension Standards
- Standard Construction – Square Head – Bolted Design
- Nominal Pressure – 3000 psi¹
- Standard Fluid – Hydraulic Oil
- Standard Temperature – -10°F to +165°F²
- Bore Diameters – 1.50" through 8.00"

- Piston Rod Diameter – 0.625" through 5.500"
- Mounting Styles – 11 standard styles at various application ratings
- Strokes – Available in any practical stroke length. See 2H & 3H Family Model Number / How to Order page for Series 2HB & 3HB minimum stroke lengths.
- Cushions – Optional at either end or both ends of stroke. "Float Check" standard at cap end of 1.50" - 6.00" bore.
- Rod Ends – Four Standard Choices – Specials to Order

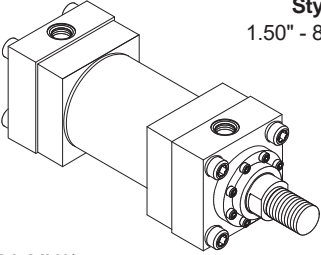

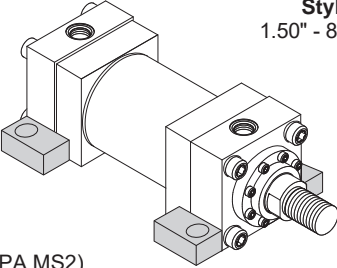

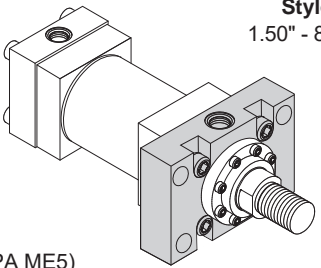

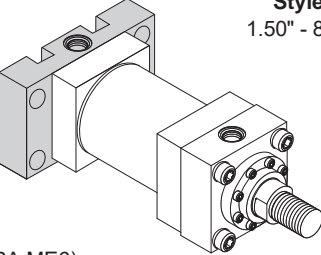

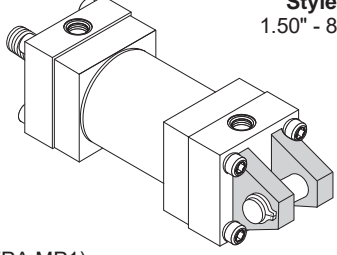

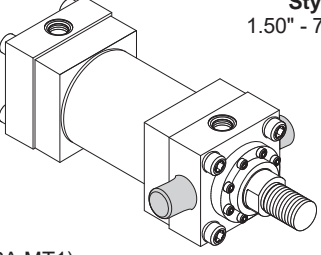

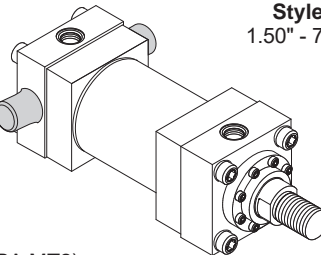

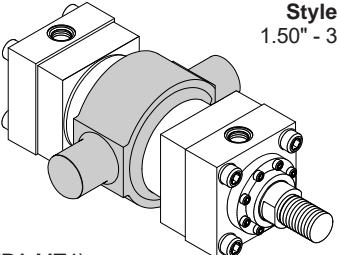

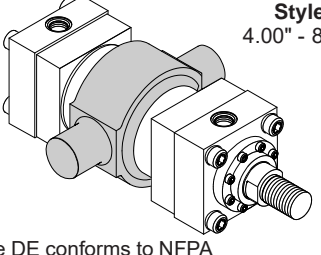

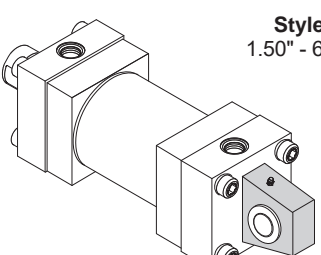

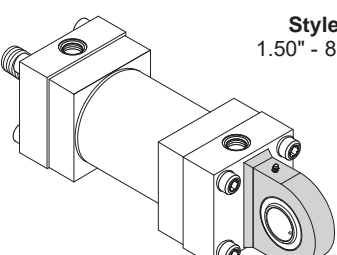

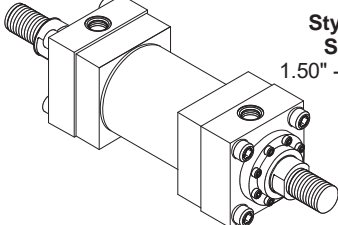

In line with our policy of continuing product improvement, specifications in this catalog are subject to change.

Note: Series 2HB and 3HB Hydraulic Cylinders fully meet ANSI/(NFPA) T3.6.7R3 - 2009 Specifications and Mounting Dimension Standards for Square Head Industrial Fluid Power Cylinders.

¹ If hydraulic operating pressure exceeds 3000 psi, send application data for engineering evaluation and recommendation. See Section H for actual design factors.

² See Section H for higher temperature service.

“Special” Thread Style 3

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify “Style 3” and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

Tie Rod Retained Gland

See Gland Retention page for styles that have this construction.

Rod End Dimensions – circular bolt-on retainer construction

See Gland Retention page to determine which bore, rod and mounting style combinations have circular bolt-on retainers and which have tie rod retained glands.

“Special” Thread Style 3

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify “Style 3” and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

¹ For special WG dimension, specify “Style 3” and give desired dimension for WG. For other changes, place “S” in the model code, and describe rod end with dimensioned sketch.

² Style 9 stroke restrictions may apply. See Style 9 Minimum Stroke Table on How to Order page for details.

Tie Rod Retained Gland

See Gland Retention page for styles that have this construction. (Dimensions on opposite page.)

³ To match pin diameter in rod eye and cap, when an oversize rod is required, specify rod end style '3', 'CC' thread and 'A' thread length for the standard rod diameter (Rod No. 1 for the bore), and 'WF' for the oversize rod. Order the rod eye and clevis bracket for the required bore size from the tables on the Style SE Spherical Bearing Accessories page.

Style SE – Recommended maximum swivel angle on each side of the cylinder centerline.

Bore Ø	Head End Mounted		Cap End Mounted	
	Angle a	Tan. of a	Angle a	Tan. of a
1.50	2.50°	0.044	3.00°	0.052
2.00	3.00°	0.052	3.00°	0.052
2.50	3.00°	0.052	3.00°	0.052
3.25	3.00°	0.052	2.75°	0.048
4.00	3.00°	0.052	3.00°	0.052
5.00	3.00°	0.052	3.00°	0.052
6.00	3.00°	0.052	3.00°	0.052

Note: Dimension X is the maximum off center mounting of the cylinder. To determine dimension X for various stroke lengths multiply the distance between pivot pin holes by tangent of angle a. For extended position use X = XL + 2X stroke.

Mounting Information

Head End Mounting

Cap End Mounting

**Double Rod Cylinder
Style K**

Double Rod End Mounting Styles

See Mounting Groups page in Section H for guidance on double rod end cylinder mounting style selection.

Mounting Styles for Single Rod Models	Mounting Styles for Corresponding Double Rod Models ¹		Dimensions Shown on This Page Supplement Dimensions on 1.50" - 6.00" Bore Pages Listed Below
	Load Connected To Rod On Cylinder Mounting End	Load Connected To Rod Opposite Cylinder Mounting End

DE	KDE ²	KDE ²	99

¹ Connect load to piston rod without 'V' notch. If only one end of the Double Rod Cylinder is to be cushioned, be sure to clearly specify which end this will be.

² Specify XI dimension for Styles DD & DE from #1 rod end (without 'V' notch).

How to Use Double Rod Cylinder Dimension Drawings

To determine dimensions for a double rod cylinder, first refer to the desired single rod mounting style cylinder shown on preceding pages of this catalog. (See table above.) After selecting necessary dimensions from that drawing, return to this page supplement the single rod dimensions with those shown on drawing at right and dimension table below. Note that double rod cylinders have a head (Dim. G) at both ends and that dimension LH replaces LG. The double rod dimensions differ from, or are in addition to those for single rod cylinders shown on preceding pages and provide the information needed to completely dimension a double rod cylinder.

On a double rod cylinder where the two rod ends are different, be sure to clearly state which rod end is to be assembled at which end. Port position 1 is standard. If other than standard, specify pos. 2, 3 or 4 when viewed from rod end #1 only. See port position information in Section H.

“Special” Thread Style 3

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify “Style 3” and give desired dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

¹For special WG dimension, specify “Style 3” and give desired dimension for WG. For other changes, place “S” in the model code, and describe rod end with dimensioned sketch.

²Style 9 stroke restrictions may apply. See Style 9 Minimum Stroke Table on How to Order page for details.

³These piston rod numbers will have 4 spanner wrench holes instead of wrench flats. See rod drawings on 3H Large Bore Piston Rod Ends page for dimensions.

	4	4.500	4	4	9.50	6.38	16.75	25.25	21.25
	5	5.000	4	4	9.50	6.38	16.75	25.25	21.25

⁴To match pin diameter in rod eye and cap, when an oversize rod is required, specify rod end style '3', 'CC' thread and 'A' thread length for the standard rod diameter (Rod No. 1 for the bore), and 'WF' for the oversize rod. Order the rod eye and clevis bracket for the required bore size from the tables on the Style SE Spherical Bearing Accessories page.

Style SE – Recommended maximum swivel angle on each side of the cylinder centerline.

Bore Ø	Head End Mounted		Cap End Mounted	
	Angle a	Tan. of a	Angle a	Tan. of a
7.00	3.00°	0.052	3.00°	0.052
8.00	3.00°	0.052	3.00°	0.052

Note: Dimension X is the maximum off center mounting of the cylinder. To determine dimension X for various stroke lengths multiply the distance between pivot pin holes by tangent of angle a. For extended position use X = XL + 2X stroke.

How to Use Double Rod Cylinder Dimension Drawings

To determine dimensions for a double rod cylinder, first refer to the desired single rod mounting style cylinder shown on preceding pages of this catalog. (See table above.) After selecting necessary dimensions from that drawing, return to this page supplement the single rod dimensions with those shown on drawing at right and dimension table below. Note that double rod cylinders have a head (Dim. G) at both ends and that dimension LH replaces LG. The double rod dimensions differ from, or are in addition to those for single

rod cylinders shown on preceding pages and provide the information needed to completely dimension a double rod cylinder.

On a double rod cylinder where the two rod ends are different, be sure to clearly state which rod end is to be assembled at which end. Port position 1 is standard. If other than standard, specify pos. 2, 3 or 4 when viewed from rod end #1 only. See port position information in Section H.

Threaded Flange Dimensions for 8.00" Bore 3HB

Threaded flanges that secure the 8.00" bore 3HB head and cap to the ends of the cylinder body extend beyond

the head and cap 'E' square. Dimensions of the flange extensions are detailed below.

Suggested Machining for Mounting Series 3HB, 8.00" Bore Style C

To install an 8.00" bore Mounting Style C, Series 3HB cylinder, the extension of the threaded flanges below the mounting lug surface must be considered. The drawings

and dimensions below can be used as a suggested guide for preparing the machine mounting surface with slots to accommodate the extensions.

Double Rod Cylinders	130

The large bore, high pressure hydraulic cylinder Parker designed to meet your needs

Parker Series 3H large bore cylinders provide unmatched reliability, performance, and innovative design features that aid in increasing productivity while reducing operating costs.

Parker's externally removable bolt-on gland assembly makes preventive and routine maintenance quick and easy! In many cases, the cylinder does not have to be removed or disassembled to facilitate service. Our innovative design provides for fast turn around, reduced downtime, and increased productivity.

In addition to our removable gland assembly, Series 3H cylinders also include a multitude of innovative design features such as: anti-extrusion body end seals, floating cushions, hi load piston (standard), and various port and rod end options to meet your application requirements.

Every Series 3H cylinder is individually tested before leaving our plant to assure proper and leak free operation. All Series 3H cylinders come with an eighteen month warranty standard.

E
Series 3H
Large Bore

These innovative design features make Parker Series 3H your best choice... for all your large bore heavy duty hydraulic cylinder applications.

Primary Seal – PolyPak double-bevel lip design combines ease of installation with rugged construction. The ultimate seal in extra heavy duty applications. Completely self-compensating and self-relieving to withstand pressure variations and conform to mechanical deflection that may occur.

Piston Rod – Hard chrome-plated and polished for maximum seal and rod bearing life. Two standard thread styles. Rod end is supplied with spanner wrench holes.

Align-A-Groove – A $\frac{3}{16}$ " wide surface machined at each end of the cylinder body. Makes precise mounting quick and easy.

End Seals – Pressure-actuated cylinder body-to-head and cap "O" rings and back-up washers.

The Cylinder Body – Heavy-wall steel tubing is honed to a micro finish bore, providing a wear surface for long lasting piston bearing and seal life.

Hi-Load Piston Seals – Are standard.

Ports – SAE O-ring straight thread ports are standard.

Secondary Seal – Double-Service Wiperseal™ – wipes clean any oil film adhering to the rod on the extend stroke and cleans the rod on the return stroke.

Bolt-On Rod Gland Assembly – Externally removable without cylinder disassembly. Long cast-iron bearing surface is inboard of the seals, assuring positive lubrication from within the cylinder. An "O" ring is used as a seal between gland and head.

Adjustable Floating Stepped Cushions – For maximum performance. Economical and flexible for even the most demanding applications. Provides superior performance in reducing shock. Cushions are optional and can be supplied at head end, cap end, or both ends without change in envelope or mounting dimensions.

Steel Cap – Bored and grooved to provide concentricity for mating parts.

Alloy Steel Tie Rod Nuts – With hardened washer.

Steel Head – Bored and grooved to provide concentricity for mating parts.

High Strength Tie Rods – Made from 100,000 PSI minimum yield steel with rolled threads for added strength.

One-Piece Nodular Iron Piston – The wide piston surface contacting cylinder bore reduces bearing loads. One piece design is piloted to piston rod assuring concentricity. Piston is locked with set screw. Anaerobic adhesive and peening of set screw locks and seals piston to rod.

E
Series 3H
Large Bore

Standard Specifications

- Heavy Duty Service
- Standard Construction – Square Head – Tie Rod Design
- Nominal Pressure – 3000 psi¹
- Standard Fluid – Hydraulic Oil
- Standard Temperature – -10°F to +165°F²
- Bore Sizes – 10.00" through 20.00"
- Piston Rod Diameter – 4.500" through 10.000"

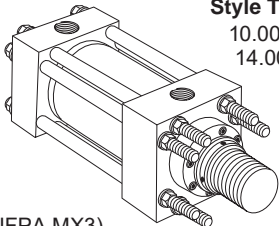

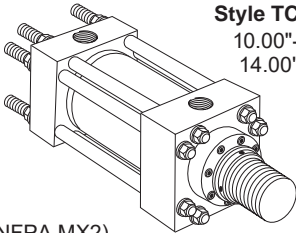

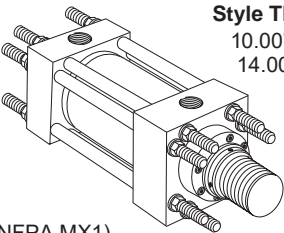

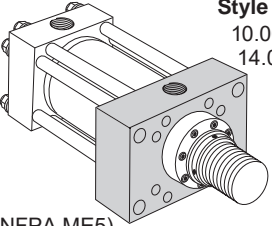

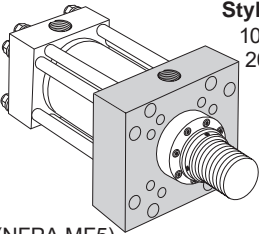

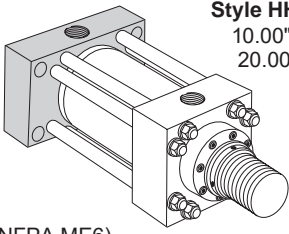

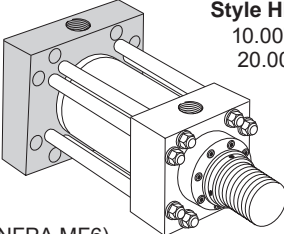

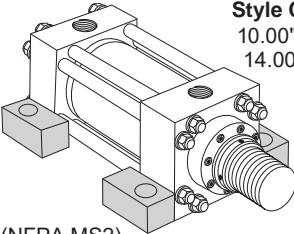

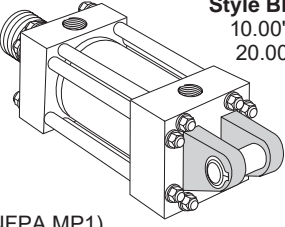

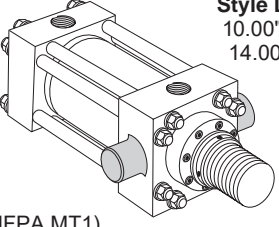

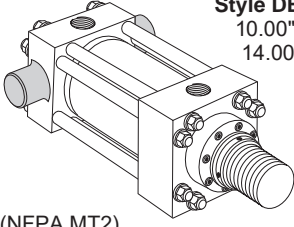

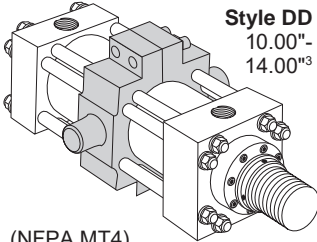

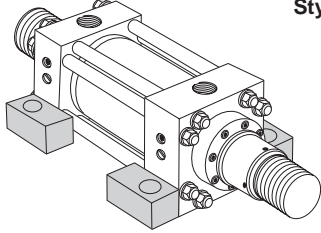

- Mounting Styles – 12 standard styles at various application ratings
- Strokes – Available in any practical stroke length
- Cushions – Optional at either end or both ends of stroke
- Rod Ends – Three Standard Choices – Specials to Order

¹ If hydraulic operating pressure exceeds 3000 psi, send application data for engineering evaluation and recommendation. See Section H for actual design factors.

² See Section H for higher temperature service.

In line with our policy of continuing product improvement, specifications in this catalog are subject to change.

“Special” Thread Style 3

Special thread, extension, rod eye, blank, etc., are also available.

To order, specify “Style 3” and give desired dimensions for KK, A & WF. If otherwise special, furnish dimensioned sketch.

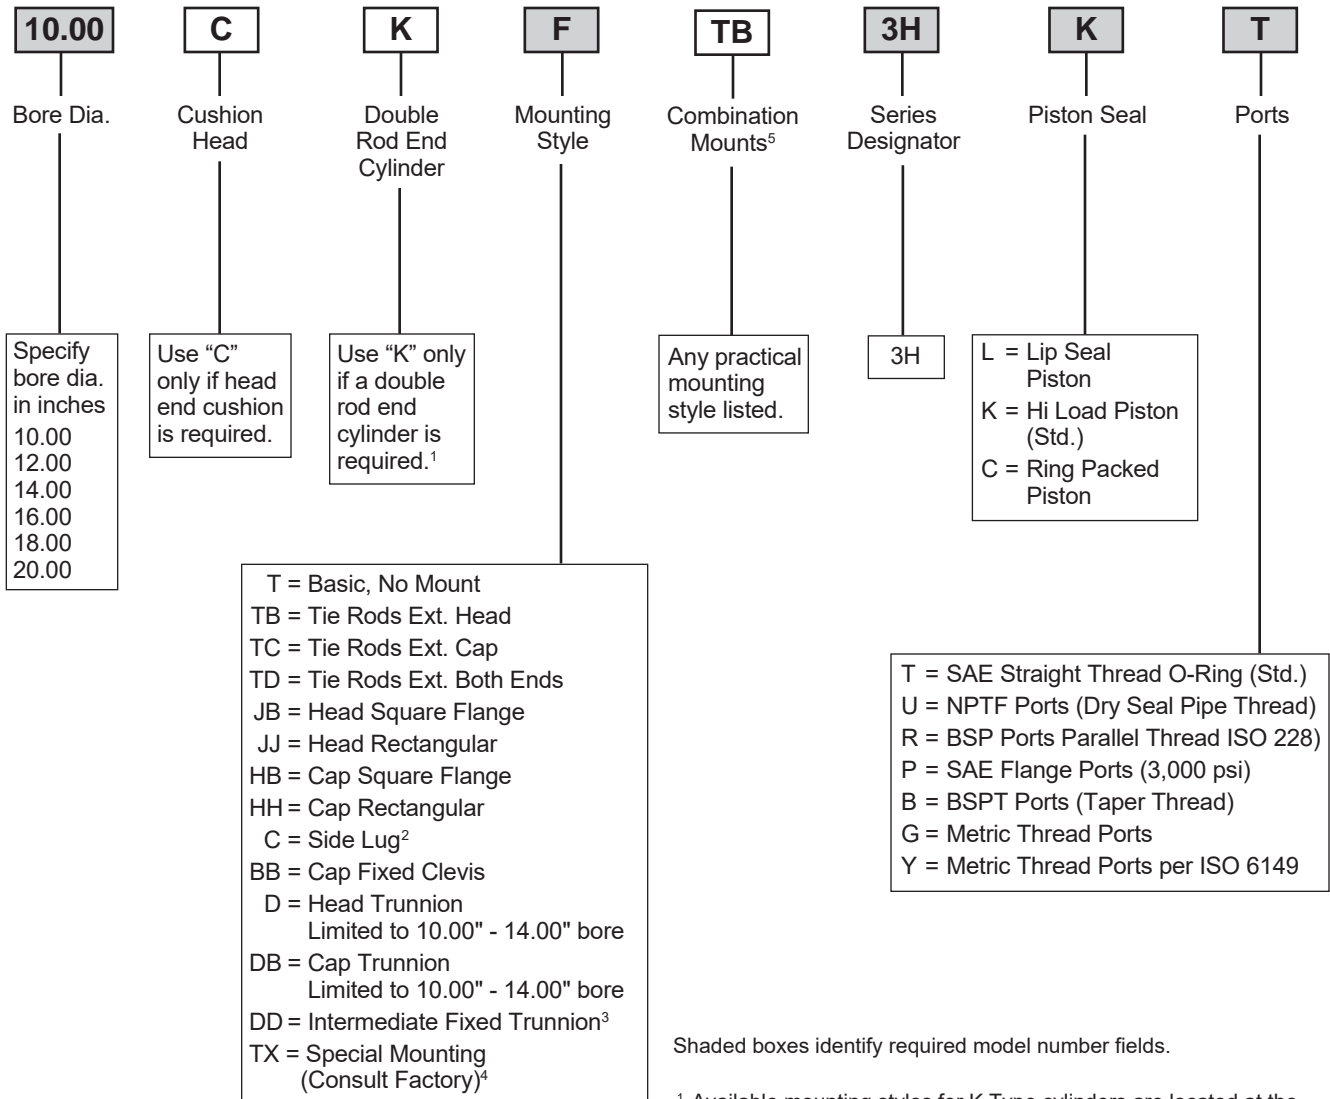

¹For special WG dimension, specify “Style 3” and give desired dimension for WG. For other changes, place “S” in the model code, and describe rod end with dimensioned sketch.

²Style 9 stroke restrictions may apply. See Style 9 Minimum Stroke Table on How to Order page for details.

Style 55 Rod End

MM Rod Ø	AD	AE +.001 - .001	AF Ø	AM Ø	WG ¹
4.500	3.19	1.499	3.50	4.45	6.50
5.000	3.19	1.499	3.88	4.95	6.63
5.500	3.94	1.874	4.38	5.45	7.50
7.000	4.06	1.999	5.75	6.95	8.44
8.000	4.06	1.999	6.50	7.95	8.69
9.000	4.63	2.374	7.25	8.95	8.75
10.000	4.63	2.374	8.00	9.95	9.75

3H Large Bore Model Code

Shaded boxes identify required model number fields.

¹ Available mounting styles for K Type cylinders are located at the end of this section. When ordering a double rod end cylinder, the piston rod number and piston rod end threads are to be specified for both rod ends.

The model number should be created as viewing the primary rod end on the left hand side.

Example: K Type Cylinder:

10.00CKTD3HKT14A29AC10.000

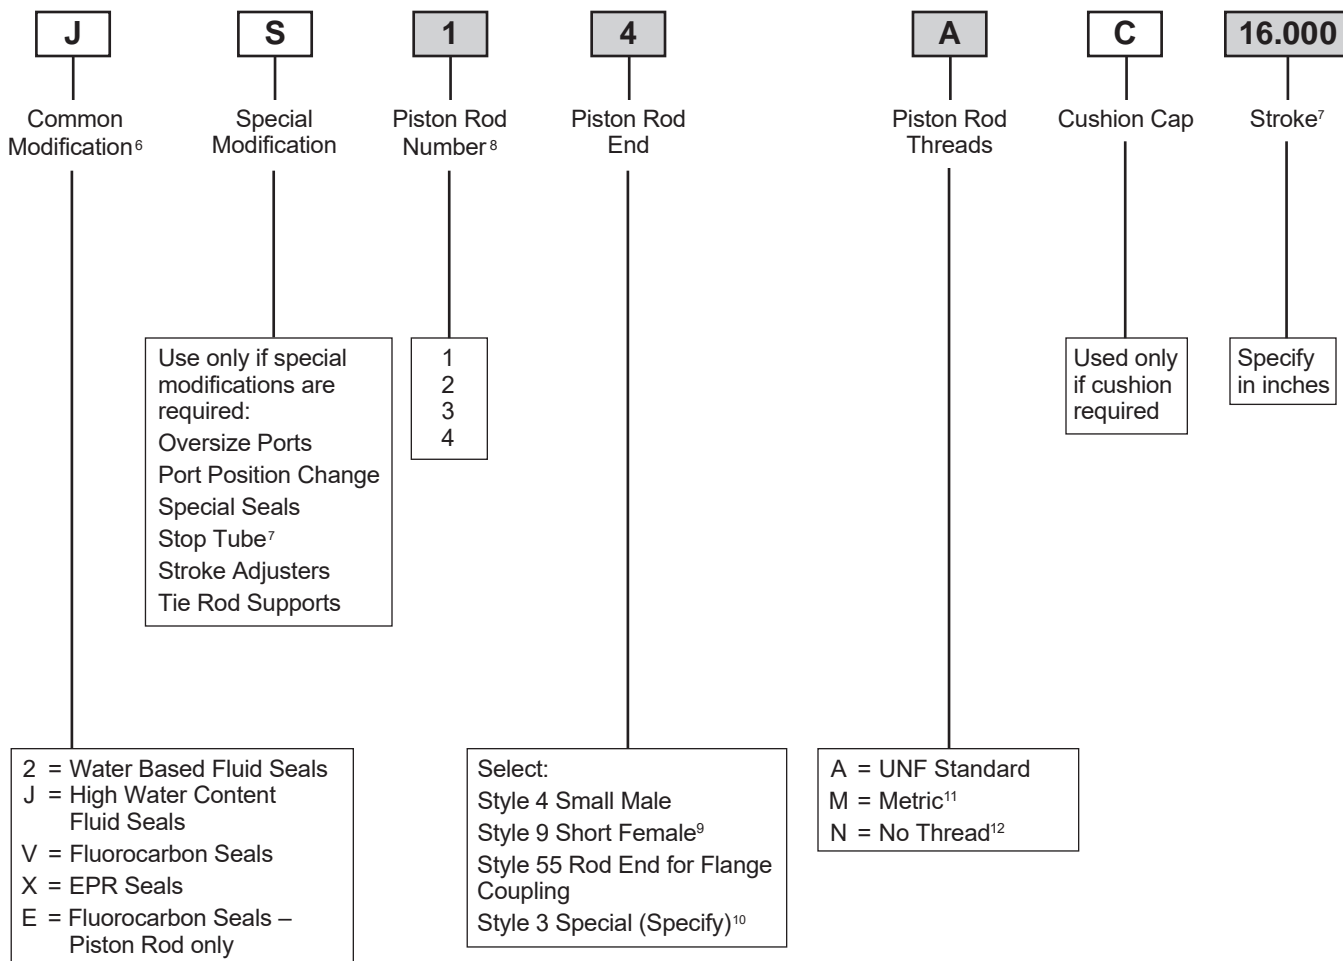

² Mounting Style C cylinders should have a minimum stroke length equal to or greater than their bore size.

³ Specify XI dimension.

⁴ Special mounting styles that do not resemble a standard catalog offering will be designated as style TX by the factory. See page 4 for instructions to enter a mounting that resembles a standard style.

⁵ In general, the model numbers as read left to right corresponding to the cylinder as viewed from left to right with the primary end at the left. The second or subsequent mountings are mountings called out as they appear in the assembly moving away from the rod end. Except when tie rod extension mountings are part of a combination, all combinations should have a "S" (Special) in the model code and a note in the body of the order clarifying the mounting arrangement.

3H Large Bore Model Code

Shaded boxes identify required model number fields.

⁶ See common modifications Section G for additional options.

⁷ S = Stop Tube. Specify: stop tube length, net stroke and gross stroke. Gross stroke = stop tube length + net stroke. Gross stroke to be placed in the model number field.

Example:

2.000 inches long stop tube
+14.000 inches net stroke
16.000 inches gross stroke

⁸ Refer to Rod buckling chart in Section H to assure rod number selected will not buckle under load.

⁹ Style 9 stroke restrictions may apply. See Style 9 minimum stroke table for details.

¹⁰ Provide dimensions for KK, A, W or WF. If otherwise special, furnish dimensioned sketch.

¹¹ See Section G for detailed information regarding standard metric rod end thread sizes.

¹² Must be specified for Piston Rod End Style 55.

How to Use Double Rod Cylinder Dimension Drawings

To obtain dimensioning information on a double rod cylinder, first select the desired mounting style and refer to the corresponding single rod cylinder model shown on the preceding pages. (See table above.) After you have determined all necessary dimensions from that drawing, turn back to this page and supplement those dimensions with additional ones from the drawing above and table at right. These added dimensions differ from, or are in addition to, those shown on the preceding pages and

provide the additional information needed to completely dimension a double rod cylinder model.

On a double rod cylinder where the two rod ends are different, be sure to clearly state which rod end is to be assembled at which end. Port position 1 is standard. If other than standard, specify pos. 2, 3 or 4 when viewed from rod end #1 only. See port position information in Section H.

Cylinder Accessories

Parker offers a complete range of cylinder accessories to assure flexibility and versatility in present or future cylinder applications.

Rod End Accessories

Accessories offered for the rod end of the cylinder include: Rod Clevis, Eye Bracket, Knuckle, Clevis Bracket and Pivot Pin. To select the proper part number for any desired accessory, refer to Chart A below and look opposite the thread size of the rod end as indicated in the first column. The Pivot Pins, Eye Brackets and Clevis Brackets are listed opposite the thread size which their mating Knuckles or Clevises fit.

Accessory Load Capacity

The various accessories on this and the following pages have been load rated for your convenience. The load capacity shown in lbs. is the recommended maximum load for that accessory based on a 4:1 design factor in tension. (Pivot Pin is rated in shear.) Before specifying,

compare the actual load or the tension (pull) force at maximum operating pressure of the cylinder with the load capacity of the accessory you plan to use. If load or pull force of cylinder exceeds load capacity of accessory, consult factory.

¹ Includes pivot pin.

² Cylinder accessory dimensions conform to ANSI/NFPA/T3.6.8 R3-2010.

Mounting Plates

Mounting Plates for Style BB (clevis mounted) cylinders are offered. To select proper part number for your application, refer to Chart B at right.

⁴ This size supplied with cotter pins.

1. Pivot Pins are furnished with Clevis Mounted Cylinders as standard.
2. Pivot Pins are furnished with (2) Retainer Rings.
3. Pivot Pins must be ordered as a separate item if to be used with Knuckles, Rod Clevises, or Clevis Brackets.

¹ Rod Clevises with pin diameters 0.312 thru 1.375 are forged steel. Rod Clevises with 1.750 pin diameter and larger are cast ductile iron.

² Includes Pivot Pin

³ Consult appropriate cylinder rod end dimensions for compatibility.

Forged Steel or Cast Ductile Iron Mounting Plate or Eye Bracket Dimensions⁵

Note: Cast ductile iron eye brackets must not be welded in place.

Cast or Forged ⁶ Part Number	Pin Ø	CB	CD Ø	DD Ø	E (As Cast)	F	FL	LR	M (As Cast)	R

0959810400	4.000	4.50	4.003	2.06	14.88	3.00 ⁸	7.50 ⁸	4.38	4.06	11.45

⁵ When used to mate with the Rod Clevis, select by pin diameter in the table above.

⁶ Eye Brackets with pin diameters 0.500 thru 1.375 are forged steel. Eye Brackets with 0.312 and 1.750 pin diameter and larger are cast ductile iron.

⁷ These dimensions vary from NFPA standard. F is increased by 0.13. Sufficient LR clearance remains for full swing arc with Parker cap clevis cylinders and rod clevises.

⁸ Mounting base thickness dimension F is increased on these sizes to provide greater load capacity than the former fabricated steel design. Cast ductile iron dimensions F and FL are 0.81 larger for 3.500 pin diameter and 1.06 larger for 4.000 pin diameter.

Rod End Accessories

Accessories offered for the rod end of the cylinder include Rod Clevis, Eye Bracket, Knuckle, Clevis Bracket, and Pivot Pin. To select the proper part number for any desired accessory, refer to the table below or on the opposite page and look in the row to the right of the rod thread in the first column. For economical accessory selection, it is recommended that rod end style 4 be specified on your cylinder order.

Accessory Load Capacity

The various accessories have been load rated for your convenience. The Load Capacity in pounds is the recommended maximum load for that accessory based on a 4:1 design factor in tension. (Pivot Pin is rated in shear.) Before specifying, compare the actual load or the tension (pull) force at the maximum operating pressure of the cylinder with the load capacity of the accessory you plan to use. If load or pull force of cylinder exceeds load capacity of accessory, consult factory.

² Clevis Bracket for 0.438 diameter pin is only available in cast ductile iron construction. See part number 0960160044 on previous page.

Parker offers a complete range of Cylinder Accessories to assure you of the greatest versatility in present or future cylinder applications. Accessories offered for spherical bearing mount cylinders include the Rod Eye,

Pivot Pin and Clevis Bracket. To select the proper part number for any desired accessory refer to the tables below.

Linear Alignment Couplers are available in 19 standard thread sizes...

Cost Saving Features and Benefits Include

- Maximum reliability for trouble-free operation, long life and lower operating costs
- Simplifying Cylinder installation and reducing assembly costs
- Increased cylinder life by reducing wear on Piston and Rod bearings
- Increase Rod Bearing and Rod Seal life for lower maintenance costs

Note: Bolts are not included with split coupler or weld plate.

⚠ WARNING: Piston rod separation from the machine member can result in severe personal injury or even death to nearby personnel. The cylinder user must make sure the weld holding the weld plate to the machine is of sufficient quality and size to hold the intended load. The cylinder user must also make sure the bolts holding split coupler to the weld plate are of sufficient strength to hold the intended load and installed in such a way that they will not become loose during the machine's operation.

Dual Axis Knuckles

Using a Dual Axis Knuckle permits increased angular movement from the cylinder center line. Clevis or Eye mounted cylinders often require movement beyond the plane that two pivot pins allow. Spherical bearing mounts permit angular movement up to 4.5° within the pivoting

plane. A Dual Axis Knuckle, with two pin holes 90° apart, installed at the cap and rod end of a mounting style BB cylinder adds two pivot points, thereby providing up to 30° movement in another plane at each end.

Maximum Achievable Angular Movement from Cylinder Centerline¹

Inboard Pin - 15° maximum movement for cylinder misalignment only.

Outboard Pin - 30° maximum movement when applying force to a load moving in a curved plane.

¹ Maximum movement is achieved with cast clevis brackets. Movement is reduced when using fabricated clevis brackets.

2H / 2HD Tie Rod Torque and 2HB Tie Bolt Torque			1.50	2.00	2.50	3.25	4.00	5.00	6.00
			18 - 19 lb-ft	45 - 49 lb-ft	45 - 49 lb-ft	120 - 124 lb-ft	131 - 135 lb-ft	312 - 316 lb-ft	528 - 544 lb-ft

Note: The tie rod torque values are for cylinders rated at 3,000 psi. Consult the factory for torque values for cylinders rated above 3,000 psi

¹ Item 119 for piston style WP (model number code W) includes both the PTFE primary seal and the redundant quad ring seal.

² The 1.50" bore WP seal groove is unique and not universal to the other seal styles. Changing an existing 1.50" bore cylinder either from or to a WP piston seal requires that a new piston and rod assembly be ordered.

Note: Item 47, cylinder body end seal, is not shown.

Gland Cartridge Wrenches

Parker's exclusive gland cartridge design makes gland replacement only a minute's work...and the Gland Cartridge Wrench Set makes it even simpler. A specially designed face-type gland wrench with flared lugs slips into an exact, sure fit on the gland, while a self-locking spanner wrench grips the gland wrench securely. No fumbling for adjustment – no accidental scoring of the piston rod, the job is done quickly...easily...safely.

You can order the Cartridge Wrench or Spanner Wrench to fit the piston rod size used in your Parker Hannifin Cylinder.

Series 2H Magnetic Piston

Position Sensing Technology for Hydraulic Cylinders – 1.50" thru 6.00" Bore

Customer Value Proposition

Parker's magnetic sensing option for heavy duty hydraulic cylinders provides OEM's and end users the ability to sense piston position economically and reliably through the use of innovative magnet and switching technology. The magnetic piston option offers all users the ability to eliminate added cylinder machining costs,

stand alone external brackets / hardware and reduced system set-up time. By incorporating sensing capability into hydraulic cylinders, the need to install, wire and adjust stand alone proximity switches can be eliminated – thus providing a clean and more efficient position monitoring system.

Series 2H Cylinder with magnetic piston

Sensing Technologies

- Parker's ALS switch works with a magnetic piston in a standard steel tube by detecting the change in polarity of the steel material as the magnet passes under the switch. Standard steel tube is more economical in longer strokes than non-ferrous stainless steel tubes required for conventional sensors. Solid State ALS switches are available in both PNP and NPN outputs and can be wired either normally open or normally closed. Magnetic piston with steel tube for ALS switches is available 1.50" – 6.00" bore and is specified with a '7' in the Piston Magnet field of the cylinder model number.
- Parker Global Switches are available in both Reed and Solid State types. Solid State switches are available in both PNP and NPN outputs. They work with a magnetic piston in a 316 stainless steel tube. Magnetic piston with a stainless steel tube for Global Switches is available 1.50" – 4.00" bore and is specified with a '3' in the Piston Magnet field of the cylinder model number.

Magnetic Switch Choices

Parker's ALS switch and Global switch are designed to offer customers an alternative means of sensing hydraulic cylinder piston position. Depending on the application, and the budget, one switch type may be better suited to fulfill customer needs than the other.

Some of the important things to consider when deciding which technology to choose are shown below. For more details on ALS and Global switches as well as other position sensing options see catalog HY08-1132.

ALS Switch

- Compatible with standard steel tube
- +10 to +30 VDC power requirement
- PNP/NPN wired NO or NC
- Solid state construction
- 2 LED indicators (power & target)
- 12mm connector
- IP 67 rated
- Temperature Range: -25°C to +85°C
- Short circuit protection

ALS Switch Kit Part Numbers

Switches are packaged with a mounting bracket.

Part Number		Switch Bracket Usage
PNP	NPN	
ALS-PH	ALS-NH	Series 2H 1.50 – 4.00 Bore
ALS-PHA	ALS-NHA	Series 2H 5.00 & 6.00 Bore

Minimum Stroke for ALS Switch

Bore Ø	Minimum Stroke
1.50	3.00
2.00	3.00
2.50	2.88
3.25	2.75

Bore Ø	Minimum Stroke
4.00	2.63
5.00	2.38
6.00	2.19

ALS Switches allow a .38 - .50 inch stroke-to-go piston travel for end-of-stroke mounting locations.

Global Switch

- Uses 316 stainless steel tube
- +10 to +30 VDC power requirement
- PNP/NPN, Reed
- Solid state construction
- 1 power LED indicator
- 8mm connector or flying leads
- IP67 rated
- Temperature Range: -25°C to + 75°C
- Short circuit protection

Global Drop-In Switches

Wiring	Reed	PNP	NPN

3-Pin Mini

EPS-7

5-Pin Mini

EPS-6

Series and Parallel Wiring

When Parker EPS-6 or 7 sensors are used as inputs to programmable controllers the preferred practice is to connect each sensor to a separate input channel of the PLC. Series or parallel operations may then be accomplished by the internal PLC programming.

Parker EPS-6 or 7 sensors may be hard wired for series operation, but the voltage drop through the sensors (see specifications) must not reduce the available voltage below what is needed to actuate the load.

Parker EPS-6 or 7 sensors may also be hard wired for parallel operation. However, the leakage current of each sensor will pass through the load. The total of all leakage currents must not exceed the current required to actuate the load. In most cases, the use of two or more EPS-6 or 7 sensors in parallel will require the use of a bypass (shunt) resistor.

Minimum Stroke

The minimum stroke for EPS-6 or 7 and CLS-1 or 4 sensors, utilizing standard components, is the cushion sleeve or spear length for the cylinder series in which the sensor is installed. See the Cushion Length Chart in this catalog for details. Contact the factory if a shorter stroke is required.

CLS-2 Threaded Style Switches

Spacers are not required. Threaded switches can be adjusted for small changes to end of stroke position sensing.

Switch Height

	3.500	3.13	
	4.000	3.38	
	4.500	2.13	

As shown in the illustrations below, these switches are magnetically operated. Dual magnets provide a dependable “snap action” for positive position sensing.

In the “Unoperated” position, the magnet assembly is attracted in the opposite direction of the arrow, causing a finely ground stainless steel connecting rod to hold the contacts open.

In the “Operated” position a ferrous part (cushion or piston) enters the sensing area and attracts the magnet assembly which causes the rod to draw the contacts together.

Operating Principle

Sensing gap: .030" to .060"

Trip point: Factory set with piston bottomed out.

Release point: Approx. 0.25" piston travel.

Minimum cylinder stroke is .50" on 1.50" & 2.00" bores; and .75" on 2.50" bore and larger.

See the CLS Specification table for additional details.

Specifications					
Style:	EPS-7	EPS-6	CLS-1	CLS-4	CLS-2
Code Designator:	H	D	F	B	G
Description:	Economical, General Purpose, 2 wire device, primarily for AC applications. (Not suitable for 3 wire 24 volt Sinking or Sourcing applications.) Also for automotive industry applications.	Economical, General Purpose, 3 wire, DC sensor, dual output: sinking and sourcing	Functional replacement for AB (Mechanical) Limit Switches in many applications, or where customer needs NC contacts, zero leakage, zero voltage drop, higher or lower load current than EPS-style	Functional replacement for AB (Mechanical) Limit Switches in many High Temperature applications, or where customer needs NC contacts, zero leakage, zero voltage drop, higher or lower load current than EPS-style.	For applications where the customer needs NC contacts, zero leakage, zero voltage drop, higher or lower load current than EPS style. Threaded style permits small adjustability of make/break location.

How to Specify EPS Proximity Switches

Parker EPS proximity switches may be ordered on Series 2H, 2HD, 2HB & 3H, 3HD, 3HB cylinders as follows:

- 1) Complete the basic cylinder model number.
- 2) Place an "S" in the model number to denote switches and/or special features.
- 3) Mounting styles D, DB, JJ, J, or H should be used with caution because of possible mounting interferences. See Available Switch Position table below for additional details.
- 4) Special modifications to cylinders other than switches must have a written description.

5) Specify letter prefix "H" for EPS-7, "D" for EPS-6, and "F" for CLS-1, "B" for CLS-4 or "G" for CLS-2, then fill in the four blanks specifying port location, switch orientation and actuation point for both head and cap. If only one switch is used, place "XXXX" in the unused blanks.

Example = H13AGG-XXXX denotes a switch on the head end only, EPS-7

Example = XXXX-H42AGG denotes a switch on the cap end only, CLS-4

Head End

H	1	3	A	GG
Specify: "H" = EPS-7 "D" = EPS-6 "F" = CLS-1' "B" = CLS-4' "G" = CLS-2 "N" = Prep for EPS-6 and EPS-7 switches "P" = Prep for CLS-1 and CLS-4 switches "T" = Prep for CLS-2 switch	Port Location See Figure 1.	Switch Location See Figure 1.	Switch Orientation See Figure 2 for EPS-7, EPS-6, CLS-1 and CLS-4.	Actuation Point GG = End of Stroke FF = Stroke to Go; See Bulletins 0840-G-E1, 2 or 3 for stroke remaining.

Cap End

H	4	2	A	GG
Specify: "H" = EPS-7 "D" = EPS-6 "F" = CLS-1' "B" = CLS-4' "G" = CLS-2 "N" = Prep for EPS-6 and EPS-7 switches "P" = Prep for CLS-1 and CLS-4 switches "T" = Prep for CLS-2 switch	Port Location See Figure 1.	Switch Location See Figure 1.	Switch Orientation See Figure 2 for EPS-7, EPS-6, CLS-1 and CLS-4.	Actuation Point GG = End of Stroke FF = Stroke to Go; See Bulletins 0840-G-E1, 2 or 3 for stroke remaining.

Note: All specified switch and port locations are as seen from rod end of cylinder.

¹ CLS-1 and CLS-4 proximity switches are not available on the head end of 1.50" bore with 1.00" rod and 2.00" bore with 1.375" rod

Available Mounting Positions¹ for EPS-6, EPS-7, CLS-1, CLS-4

	CAP	NA	NA	NA	1,2,3,4	1,2,3,4	1,2,3,4	1,2,3,4	1,2,3,4	1,2,3,4

¹ Positions 1, 2, 3 and 4 are determined by viewing cylinder from piston rod end (See Figure 1). The electrical connector orientation may be restricted in some cases.

² On 1.50" - 5.00" bore Style JJ cylinders, switches will extend beyond mounting surface of cylinder.

³ On 6.00" bore cylinders and larger switches mounted in position 2 or 4 will interfere with the installation and removal of mounting bolts.

Figure 1

Figure 2

Water Submersible Option for Series 2H, 2HD, 2HB and 3H, 3HD, 3HB Hydraulic Cylinders

Optional Polypak Inner and Outer Rod Seals resist internal and external pressure. Required for depths over 25 ft and up to 5000 ft.

Optional Dual Cylinder Body Seals resist external pressure. Required for depths over 25 ft and up to 5000 ft.

Optional 17-4 stainless steel tie rods and Bumax 88 stainless steel nuts resist corrosion.

Specifications:

- Submersion Depth: up to 5000 ft
- Heavy Duty Service – ANSI (NFPA) T3.6.7R2 – 1996 Specifications and Mounting Dimension Standards
- Nominal Pressure – 3000 psi
- Operating Temperature – -10°F to +165°F
- 17-4 PH chrome plated stainless steel piston rod
- Stainless steel name tag affixed with stainless steel wire around tie rod

Cylinder Seal Construction:

- Up to 25 ft – Standard rod seal and body seals
- Over 25 ft to 5000 ft
 - Subsea rod seal package that includes a Polypak oil seal and an outward facing Polypak wiper to seal against water intrusion.
 - Subsea body seal package with ID oil seal and body-end o-ring to seal against water intrusion.
 - Not available with 0.625 Ø piston rod

Standard Options for Water Submersible Cylinders:

Material

- 17-4 PH stainless steel tie rods and Bumax 88 stainless steel tie rod nuts
- Chrome plated body ID

Surface Treatments for Corrosion Protection

- Electroless nickel plated exterior (head, cap, body and retainer)
- Inorganic zinc primer (zinc primer only – without bond coating)
- Inorganic zinc primer with epoxy undercoat and an acrylic topcoat
- Epoxy undercoat and topcoat

Custom Options available for Special Order:

- End-of-Stroke Switches
- All stainless steel construction

How to Order Water Submersible Option

Water Submersible Option for Series 2H, 2HD, 2HB and 3H, 3HD, 3HB Hydraulic Cylinders

How to order:

1. Specify the complete Parker Cylinder Model Number.
2. Put an "S" in the model number to indicate a special cylinder.
3. Include the 3 digit Submersible Code.
4. For custom options, such as switches, provide a complete description or drawing of your requirements.

Submersible Code

When selecting the submersible option, an S must be placed in the Model Number. Select Submersible Code values for the required Submersion Depth, Cylinder Body, and Corrosion Protection. See the example Model Number below:

Feature	Code	Specification	For
Submersion Depth	1	Conventional rod gland and body seal design	Depths to 25 ft
	2	Submersible rod gland and dual cylinder body seals	Depths to 5000 ft
	3	Other	Specify depth / requirements
Cylinder Body	P	Plain ID	
	C	Chrome plated ID	
Corrosion Protection	1	Inorganic zinc primer	Splash & short term immersion service where equipment is top coated by the customer
	2	Inorganic zinc primer with stainless steel tie rods, nuts, & fasteners	
	3	Electroless nickel plated exterior with stainless steel tie rods, nuts, & fasteners	
	4	Inorganic zinc primer, epoxy undercoat, & anacrylic topcoat.	Splash & short term immersion service
	5	Inorganic zinc primer, epoxy undercoat, & anacrylic topcoat with stainless steel tie rods, nuts, & fasteners	
	6	Epoxy base & top coat.	
	7	Epoxy base & top coat. with stainless steel tie rods, nuts, & fasteners	Long term immersion service
9	Other	Specify requirements	

Example:

4.00 BB 2HK T S 14 X 24.00

S=Submersible Code: 2P1

(describes a 4" x 24" cylinder for submersion up to 5000 ft, with a plain cylinder body ID and Inorganic Zinc Primer corrosion protection.)

Water Submersible Codes and Features Supplied

Depths to 5000 ft¹

Submersible Cylinder Feature	Water Submersible Code ¹													
	2P1	2P2	2P3	2P4	2P5	2P6	2P7	2C1	2C2	2C3	2C4	2C5	2C6	2C7
17-4 PH piston rod	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Stainless steel tag	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Submersible rod gland	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Dual cylinder body seals	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Chrome plated cylinder ID								X	X	X	X	X	X	X
SS tie rods, nuts, & fasteners		X	X		X		X		X	X		X		X
Electroless nickel plated exterior			X							X				
Inorganic zinc primer	X	X						X	X					
Inorganic zinc primer with topcoats				X	X						X	X		
Epoxy base & topcoat						X	X						X	X

¹ Corresponding submersible codes for depths to 25 ft begin with 1 (e.g. 1P1, 1P2, etc.) and include all of the features marked for 5000 ft depth **except** Submersible Rod Gland and Dual Cylinder Body Seals.

Notes

Notes

Modifications: The following modifications can be supplied on most Parker cylinders.

Metallic Rod Scraper

When specified metallic rod scrapers can be supplied instead of the standard synthetic rubber wiperseal. Recommended in applications where contaminants tend to cling to the extended piston rod and would damage the synthetic rubber wiperseal. Installation of metallic rod scraper does not affect cylinder dimensions. It is available at extra cost.

Parker Crown Wiper™ for Series 2HD / 2HB and 7.00" & 8.00" bore 3HD / 3HB

For environments that contain fine abrasive particulate specify the Crown Wiper option. The Crown Wiper is a proven superior alternative to piston rod end boots or metallic wipers that can ingest particulate. It has a sharp leading edge to effectively clean the piston rod and a beveled shape to prevent contaminant intrusion by channeling it away from the gland. It also acts as a secondary seal to wipe clean any oil film adhering to the rod on the extend stroke.

Standard Crown Wiper material for Seal Class 1 and 2 service is durable polyurethane. Optional FKM material is available for Class 5 service. The Crown Wiper requires a unique gland but does not change cylinder mounting dimensions

Crown Wiper Rod Gland Kits are available to retrofit existing 2HD / 2HB & 3HD / 3HB cylinders. See Section F Replacement Parts for details.

Rod End Boots

Cylinders have a hardened bearing surface on the piston rod to resist external damage, and are equipped with the high efficiency "Wiperseal" to remove external dust and dirt. Exposed piston rods that are subjected to contaminants with air hardening properties, such as paint, should be protected. In such applications, the use of a collapsing cover should be considered. This is commonly referred to as a "boot". Calculate the longer rod end required to accommodate the collapsed length of the boot from the following data.

LF	.13	.13	.13	.13	.13	.13	.10	.10	.10	.10	.10
OD	2.25	2.63	3.00	3.38	3.75	4.38	5.13	5.63	6.25	7.00	7.50
MM	.625	1.000	1.375	1.750	2.000	2.500	3.000	3.500	4.000	5.000	5.500

To determine extra length of piston rod required to accommodate boot, calculate
 $BL = \text{Stroke} \times LF + 1.13"$
 $BL + \text{Std. W or WF} + A = \text{length of piston rod to extend beyond the retainer.}$

NOTE: Check all Boot O.D's against std. "E" dimension from catalog. This may be critical on foot mounted cylinders.

Gland Drain

Hydraulic fluids tend to adhere to the piston rods, during the extend stroke, and an accumulation of fluid can collect in the cavity behind the gland wiperseal on long stroke cylinders.

A 1/8" NPTF gland drain port can be provided in the gland retainer. A passage in the gland between the wiperseal and lipseal is provided to drain off any accumulation of fluid between the seals. See drawing below.

It is recommended that the gland drain port be piped back to the fluid reservoir and that the reservoir be located below the level of the head of the cylinder.

On 1.50" bore with 0.625" rod the drain port is located in the head adjacent to the port. The retainer thickness

on 1.50" bore with 1.000" rod and gland drain is increased to 0.63". On 2.00"-8.00" bore sizes the drain port is located in the retainer as shown. On Style JJ with gland drain, the drain port is in the head.

Air Bleeds

In most hydraulic circuits, cylinders are considered self-bleeding when cycled full stroke. If air bleeds are required and specified, 1/8" NPTF Air Bleed Ports for venting air can be provided at both ends of the cylinder body, or on the head or cap. To order, specify "Bleed Port", and indicate position desired.

Tie Rod Supports

Rigidity of Envelope – Parker heavy duty hydraulic cylinders have advantages in rigidity within the limits of the cylinder tube to resist buckling. For long stroke tie rod cylinders, within practical limits, Parker provides Tie Rod Supports (see table below) that move the tie rod centerlines radially outward.

To avoid the need for Tie Rod Supports, specify Series 2HB non-tie rod style for long stroke applications.

Standard tie rod supports are kept within the envelope dimensions of the head and cap, and generally do not interfere with mounting a long cylinder.

Number of Supports Required	Bore Ø	Stroke (Inches)												
		36	48	60	72	84	96	108	120	132	144	156	168	
1.50	—	—	1	1	1	2	2	2	3	3	3	4		
2.00	—	—	—	1	1	1	1	2	2	2	2	3		
2.50	—	—	—	—	—	1	1	1	1	1	2	2		
3.25	—	—	—	—	—	—	—	1	1	1	1	1		
4.00	—	—	—	—	—	—	—	—	—	1	1	1		

Note: 5.00" through 14.00" bore sizes — no supports required.

Stroke Adjusters

For the requirement where adjusting the stroke is specified. Parker has several designs to offer, one of which is illustrated below. This is suitable for infrequent adjustment and is economical¹.

Bore Ø	D	J	K	L (Max.)
1.50	1/2 - 20	0.31	0.94	5
2.00	3/4 - 16	0.44	1.25	8
2.50, 3.25	1 - 14	0.63	1.69	9
4.00	1 1/2 - 12	0.94	2.13	18
5.00	2 - 12	0.94	2.69	20
6.00	2 1/2 - 12	1.69	3.13	20
7.00	3 - 12	2.00	3.25	20
8.00	3 1/2 - 12	2.38	3.50	20

Here a "retracting stroke adjuster" must be called for in specifications, and the length of the adjustment must be specified.

Where frequent adjustment or cushions at the cap end are required, other designs are available according to application needs.

¹ Infrequent is defined by positioning the retract stroke in a couple of attempts at original machine set up. The frequent stroke adjuster is recommended for adjustments required after the original equipment has been adjusted by the original machine manufacturer.

Thrust Key Mountings

Thrust key mountings eliminate the need of using fitted bolts or external keys on side mounted cylinders. Parker cylinders in mounting styles CP and FP can be provided with the gland retainer plate extended below the mounting side of the cylinder (see illustration below). This extended retainer plate can then be fitted into a keyway milled into the mounting surface of the machine member. This is referred to as the "P" Modification of any side mounting style.

Note: Please consult factory when replacing HD Series cylinders.

Bore Ø	FT	PA	PD Mounting Styles CP & FP
1.50	.312 -0.002 +.000	0.19	1.44
2.00	.562 -0.002 +.000	0.31	1.81
2.50	.562 -0.002 +.000	0.31	2.06

8.000	-	M140x4	8.00
9.000	-	M160x4	9.00
10.000	-	M180x4	10.00

Global Shield™ Rod Coating Technology

A Dramatically Different Approach to Resisting Corrosion

Parker's **Global Shield** rod coating technology is specifically designed to address corrosion resistance requirements of challenging industrial applications. When compared to traditional rod coatings, **Global Shield** has the following advantages:

- **Significantly Improved Corrosion Resistance** from the single-layer, fully dense, submicron structure and the lack of micro cracks inherent to chrome plating.
- **Lower Friction**
- **Ductile and Tough** so when the rod bends, it does too
- **Engineered Hardness** (HRC 54 minimum) for wear-resistance

The **value** that you will receive from **Global Shield** includes:

- **Less Downtime** from reduced maintenance intervals (cylinder repairs and seal replacements)
- **Longer Seal Life** in corrosive environments
- **Lower Service Costs** since you won't need to replace the piston rod due to corrosion

Performance Validated in the Lab and in the field

This breakthrough proprietary technology, owned and manufactured by Parker Hannifin Corporation, has been thoroughly tested in the lab and in the field to validate performance in the areas of corrosion and dynamic wear resistance. Cylinders protected with Parker's

Global Shield coating have demonstrated resistance to corrosion up to 8x longer than conventional coatings. Tests also confirm leak-free performance even after 1 million cycles and 2,000 hours of salt spray.

Availability

- Rod diameters from ½" to 15"
- Rod lengths to 13 feet
- Standard thickness – 0.001"
Up to 0.020" available; corrosion protection increases as the thickness increases
- Standard substrate – 1045/1050 carbon steel
Other substrates available

How to Order

Enter an 'S' in the Special Modifications field of the model number and specify Global Shield Piston Rod Coating. Unless otherwise specified, standard 0.001" thickness will be supplied.

For additional Global Shield information see Bulletin HY08-0896.

General Formula

The cylinder output forces are derived from the formula:

$$F = P \times A$$

Where F = Force in pounds.

P = Pressure at the cylinder in
pounds per square inch, gauge.

A = Effective area of cylinder piston
in square inches.

Theoretical Pull Forces for Hydraulic Cylinders

Cylinder Weights – Series 2H/2HD & 3H/3HD Engineering Data

The weights shown below are for standard Series 2H / 2HD and 3H / 3HD hydraulic cylinders equipped with various diameter piston rods. To determine the net weights of a cylinder, first select the proper basic weight for zero stroke, then calculate the weight of the cylinder rod stroke and add the result to the basic weight. For extra

rod extension use piston rod weights per inch shown in Table C. Weights of cylinders with intermediate rods may be estimated from table below by taking the difference between the piston rod weights per inch and adding it to the Code 1 weight for the cylinder bore size involved.

1.750	0.68	3.500	2.72	5.500	6.72

Operating Fluids and Temperature Range

Fluidpower cylinders are designed for use with pressurized air, hydraulic oil and fire resistant fluids, in some cases special seals are required.

Class 1 – Standard Seals

Class 1 seals are intended for use with fluids such as: air, nitrogen, mineral base hydraulic oil or MIL-H-5606 within the temperature range of -10°F (-23°C) to +165°F (+74°C). Generally they are nitrile except for piston rod seals in hydraulic cylinders. However the individual seals may be nitrile (Buna-N) enhanced polyurethane, polymyte, PTFE or filled PTFE.

Class 2 – Water Base Fluid Seals

Generally class 2 seals are intended for use with water base fluids within the temperature of -10°F (-23°C) to +165°F (+74°C) except for High Water Content Fluids (HWCF) in which case Class 6 seals should be used. Typical water base fluids are: Water, Water-Glycol, Water-in-Oil Emulsion, Houghton-Safe 27, 620, 5040, Mobil Pyrogard D, Shell Iruis 905, Ucon Hydrolube J-4. These seals are nitrile.

Class 3 – Ethylene Propylene (EPR) Seals

Class 3 seals are intended for use with some Phosphate Ester Fluids between the temperatures of -10°F (-23°C) to +130°F (+54°C). Typical fluids compatible with EPR seals are Skydrol 500 and 700. EPR are Ethylene Propylene. Note: EPR seals are not compatible with mineral base hydraulic oil or greases. Even limited exposure to these fluids will cause severe swelling.

Class 4 – Low Temperature Nitrile Seals

Class 4 seals are intended for low temperature service with the same type of fluids as used with Class 1 seals within the temperature range of -50°F (-46°C) to +150°F (+66°C). Note: Certain fluids may react adversely with Class 4 seals compared to Class 1 seals.

Class 5 – Fluorocarbon (FKM) Seals

Class 5 seals are intended for elevated temperature service or for some Phosphate Ester Fluids such as Houghton-Safe 1010, 1055, 1120; Fyrquel 150, 220, 300, 350; Mobile Pyrogard 42, 43, 53, and 55. However, they are not compatible with Phosphate Ester Fluids such as Skydrols. Class 5 seals can operate with a temperature range of -10°F (-23°C) to +300°F (+149°C). For temperatures above +250°F (+121°C) the cylinder must be manufactured with non-studded piston rod and thread and a pinned piston to rod connection.

Class E – Fluorocarbon piston rod gland seals only

Intended for applications where only the rod gland is exposed to fluids or temperatures needing fluorocarbon compatibility.

Class 6 – HWCF Seals

Class 6 seals are intended for High Water Content Fluids (HWCF) such as Houghton, Hydrolubric 120B and Sonsol Lubrizol within the

temperature range of +40°F (+4°C) to +120°F (+49°C). Class 6 seals are special nitrile compound dynamic seals. Because of the viscosity of these fluids, cylinders specified with class 6 seals, will also be modified to have straight cushions.

Class 8 – High Temperature Seals

Class 8 seals consist of filled PTFE piston seal, rod seals and wiperseal. They are intended for high temperature applications, to 400° F (204° C), where longer seal life and improved high temperature sealing performance is required. Minimum operating temperature is -15°F (-26°C). Body and gland o-ring seals will be fluorocarbon. Fluid resistance is comparable to Class 5. Cylinders incorporating Class 8 Seals will not have studded piston rods.

Class N – Class 8 piston rod gland seals only – all other seals are fluorocarbon

Intended for applications where only the rod gland is exposed to fluids or temperatures needing filled PTFE seal compatibility.

Warning ⚠

The piston rod stud and the piston rod to piston threaded connections are secured with an anaerobic adhesive which is temperature sensitive. Cylinders are assembled with anaerobic adhesive having a maximum temperature rating of +250°F (+121°C). Cylinders specified with all other seal compounds (built before 1997) were assembled with anaerobic adhesive having a maximum operating temperature rating +165°F (+74°C). These temperature limitations are necessary to prevent the possible loosening of the threaded connections. Cylinders originally manufactured (before 1997) with class 1 seals (Nitrile) that will be exposed to ambient temperatures above +165°F (+74°C) must be modified for higher temperature service. Contact the factory immediately and arrange for the piston to rod and the stud to piston rod connections to be properly re-assembled to withstand the higher temperature service.

Water Service

Series 2H cylinders can be modified to make them more suitable for use with water as the operating medium. The modifications include chrome-plated cylinder bore; electroless nickel-plated head, cap and piston; chrome-plated 17-4 stainless steel piston rod; chrome plated cushion sleeve or cushion spear. Water and high water base fluid operated cylinders are best used on short stroke applications or where high pressure is applied only to clamp the load.

Warranty

Parker Hannifin will warrant cylinders modified for water or high water content fluid service to be free of defects in materials or workmanship, but cannot accept responsibility to premature failure due to excessive wear due to lack of lubricity or where failure is caused by corrosion, electrolysis or mineral deposits within the cylinder.

Fluids and Temperature Range

Class No.	Typical Fluids	Temperature Range
1 (Standard) (Nitrile Polyurethane)	Air, Nitrogen Hydraulic Oil, Mil-H-5606 Oil	-10°F (-23°C) to +165°F (+74°C)
2 Optional Water Base Fluid Seal	Water, Water-Glycol, HWCF — See Class 6 below. Water-in-Oil Emulsion Houghto-Safe, 271, 620, 5040. Mobil Pyrogard D, Shell Iruis 905. Ucon Hydrolube J-4	-10°F (-23°C) to +165°F (+74°C)
3 Special (EPR) (at extra cost) Note: (EPR) seals are not compatible with Hydraulic Oil	Some Phosphate Ester Fluids Skydrol 500, 7000	-10°F (-23°C) to +130°F (+54°C)
4 Special (Nitrile) (at extra cost)	Low Temperature Air or Hydraulic Oil	-50°F (-46°C) to +150°F (+66°C)
5 Optional (at extra cost) (Fluorocarbon Seals) Note: Fluorocarbon seals are not suitable for use with Skydrol fluid, but can be used with hydraulic oil if desired.	High Temperature Houghto-Safe 1010, 1055, 1120 Fyrquel 150, 220, 300, 550 Mobil Pyrogard 42,43,53,55	See paragraph on Fluorocarbon seals for recommended temperature range.
6 Optional (HWCF) (at extra cost)	Houghton, Hydrolubric 120B Sonsol Lubrizol, for other HWCF — consult factory.	+40°F (+4°C) to +120°F (+49°C)
8 Optional (at extra cost) Energized PTFE	See Class 5 Seals	-15°F (-26°C) to +400°F (+204°C)

Application Data

The proper application of a fluid power cylinder requires consideration of the operating pressure, the fluid medium, the mounting style, the length of stroke, the type of piston rod connection to the load, thrust or

tension loading on the rod, mounting attitude, the speed of stroke, and how the load in motion will be stopped. Information given here provides pressure rating data for pneumatic and hydraulic cylinders.

Pressure Ratings

Standard operating fluid — clean, filtered hydraulic oil. Pressure ratings for heavy-duty hydraulic cylinders are shown in the table.

Series 2H/2HD/2HB and 3H/3HD/3HB hydraulic cylinders are recommended for pressures to 3000 psi for heavy-duty service with hydraulic oil. The 4:1 design factor ratings shown are based on tensile strength of material and are for standard rod diameter only. The rating is conservative for continuous severe applications. Design factors at other pressures can be calculated from this rating. In addition, mounting styles, stroke, etc., should be considered because of the limiting effect they may have on these ratings.

**Series 2H/2HD/2HB & 3H/3HD/3HB Hydraulic Cylinders
Maximum Pressure Ratings**

Bore Ø	Rod Ø	4:1 ¹ Design Factor (Tensile) (psi)	Heavy-Duty Service (psi)
1.50	0.625	2530	3000
2.00	1.000	2950	3000
2.50	1.000	2340	3000
3.25	1.375	2250	3000
4.00	1.750	2130	3000
5.00	2.000	2170	3000
6.00	2.500	2270	3000

10.00	4.500	2720	3000
12.00	5.500	2580	3000
14.00	7.000	2320	3000
16.00	8.000	2750	3000
18.00	9.000	2900	3000
20.00	10.000	2640	3000

¹ Applies to all mountings except Styles J, JB and H.

Piston Friction

Parker's new universal piston design provides not only superior sealing and wear performance, but also conserves operating energy with reduced running friction when compared to traditional sealing technologies. Running friction test results for the most

popular seal configurations, HP Polyurethane Piston Seal and KP filled PTFE Piston Seal in 2.00", 4.00", 6.00" and 8.00" bores are shown in graphs below. Friction for intermediate bore sizes can be estimated using curves for bore sizes tested.

Parker HP Polyurethane Piston Seal

Parker KP Filled PTFE Piston Seal

Gland Friction

Gland friction is also a factor in cylinder operating efficiency and combined with piston seal friction will yield an overall cylinder running friction value. Running friction test results for 2H (TS2000) and 2HD / 2HB (Tri-Lip)

lipseal glands and Low Friction glands in 1.000", 1.750", 2.500" and 5.000" piston rod diameters are shown in the graphs below. Friction for intermediate rod diameters can be estimated using curves for bore sizes tested.

Piston Orifice

Parker's RP Thermoplastic piston seal is fully extrusion resistant and the choice for applications formerly served by cast iron rings. For some applications, cast iron rings are selected because of the inherent piston bypass. Where bypass is required for the RP seal (or any other universal piston seal style), a piston orifice option is available. There are three orifice diameters to choose from, 0.016", 0.024" and 0.032". Flow charts at right detail the bypass flow at various pressures for each orifice. Specify the orifice by placing an 'S' in the Special field of the model number and describe the orifice as in the following example: S = 0.024" Piston Orifice (insert desired orifice dia). Piston orifice not available in bores 1.50", 2.00" and 2.50" with rod codes 2 & 3.

Ports

Ports

Series 2H/2HD/2HB and 3H/3HD/3HB cylinders can be supplied with SAE straight O-ring ports or NPTF pipe thread ports. If specified on your order, extra ports can be provided on the sides of heads or caps that are not occupied by mountings or cushion valve.

Standard port location is position 1 as shown on line drawings in product catalog and Figure 1 below. Cushion adjustment needle and check valves are at positions 2 and 4 (or 3), depending on mounting style. Heads or caps which do not have an integral mounting can be rotated and assembled with ports at 90° or 180° from standard position. Mounting styles on which head or cap can be rotated at no extra charge are shown in Table A below. To order, specify by position number. In such assemblies the cushion adjustment needle and check valve rotate accordingly since their relationship with port position does not change.

Figure 1

Table A

Mounting Style	Port Position Available	
	Head End	Cap End
TB, TC, TD, J, H, JB, HB, DD, DE	1, 2, 3 or 4	1, 2, 3 or 4
HH, DB, BB, SB, SE	1, 2, 3 or 4	1 or 3
JJ, D	1 or 3	1, 2, 3 or 4
C, F	1	1

Ports can be supplied at positions other than those shown in Table A at an extra charge. To order, specify port position as shown in Figure 1.

Straight Thread Ports

The SAE straight thread O-ring port is recommended for hydraulic applications. Parker will furnish this port configuration at positions shown in Table A. This port can also be provided at positions other than those shown in Table A at an extra charge. SAE port size numbers are listed next to the NPTF pipe thread counterparts for each bore size in the respective product catalogs. Size number, tube O.D., and port thread size for SAE ports are listed in Table B.

Table D – Standard Port Sizes

8	0.50	3/4 - 16	32	2.00	2 1/2 - 12
10	0.63	7/8 - 14	—	—	—

Note: For the pressure ratings of individual connectors, contact your connector supplier. Hydraulic cylinders applied with meter out or deceleration circuits are subject to intensified pressure at the cylinder piston rod end. The rod end pressure is approximately equal to:

$$\frac{\text{Effective Cap End Piston Area}}{\text{Effective Rod End Piston Area}} \times \text{Operating Pressure}$$

International Ports

Other port configurations to meet international requirements are available at extra cost. Parker Series 2H/2HD/2HB and 3H/3HD/3HB cylinders can be supplied, on request, with British standard taper port (BSPT). Such port has a taper of 1 in 16 measured on the diameter (1/16" per inch). The thread form is Whitworth System, and size and number of threads per inch are as follows:

Table C — British Standard Pipe Threads

Nominal Pipe Size	No. Threads Per Inch	Pipe O.D.
1/8	28	0.383
1/4	19	0.518
3/8	19	0.656
1/2	14	0.825
3/4	14	1.041
1	11	1.309
1 1/4	11	1.650
1 1/2	11	1.882
2	11	2.347

British standard parallel internal threads are designated as BSPP and have the same thread form and number of threads per inch as the BSPT type and can be supplied, on request, at extra cost. Unless otherwise specified, the BSPP or BSPT port size supplied will be the same nominal pipe size as the NPTF port for a given bore size cylinder.

Metric ports can also be supplied to order at extra cost. See table below for standard port size for each bore.

Bore Ø	T SAE	U NPTF	P SAE Code 61 Flange	Y ISO 6149	B BSPT R BSPP	G Metric

16.00-20.00	24	—	3	—	—	—

¹Available with 1.000 inch rod diameter only.

Ports

Overize Ports

Overize NPTF or SAE straight thread ports can be provided, at an extra charge. For ports one size larger than standard, welded port bosses which protrude from the side of the head or cap are supplied. For dimensions, see drawings and tables below. Series 2H/2HD/2HB and 3H/3HD/3HB cylinders equipped with cushions at the cylinder cap end can sustain damage to the cushion check valve (cushion bushing) if excessive oil flow enters the cylinder from the cap end port. Cylinders which are equipped with cap end cushions and ordered with one size overize ports having hydraulic fluid velocity exceeding 25 ft./sec. in the line entering the cap end of the cylinder should be ordered with a "solid cushion" at cap

end. All cylinders ordered with double overize ports should always be ordered with a "solid cushion" at cap end.

Cylinders which are connected to a meter out flow control with flow entering the cap end of a cylinder provided by an accumulator may also experience damage to the cushion bushing due to high instantaneous fluid flows. This condition can be eliminated by using a meter in flow control or "solid cushions" at cap end.

Stroke Data

Parker cylinders are available in any practical stroke length. The following information should prove helpful to you in selecting the proper stroke for your cylinder application.

Stroke Tolerances

Stroke length tolerances are required due to buildup of tolerances of piston, head, cap and cylinder tube. Standard production of stroke tolerances run +.031" to

-.015" up to 20" stroke, +.031" to -.020" for 21" to 60" and +.031" to -.031" for greater than 60" stroke. For closer tolerances on stroke length, it is necessary to specify the required tolerance plus the pressure and temperature at which the cylinder will operate. Stroke tolerances smaller than .015" are not generally practical due to elasticity of cylinders. If machine design requires such close tolerances, use of a stroke adjuster may achieve the desired result.

Mounting Groups

Standard mountings for fluid power cylinders fall into three basic groups. The groups can be summarized as follows:

Group 1 Straight Line Force Transfer with fixed mounts which absorb force on cylinder centerline.

Group 2 Pivot Force Transfer. Pivot mountings permit a cylinder to change its alignment in one plane.

Group 3 Straight Line Force Transfer with fixed mounts which do not absorb force on cylinder centerline.

Because a cylinder's mounting directly affects the maximum pressure at which the cylinder can be used, the chart below should be helpful in selection of the proper mounting combination for your application. Stroke length, piston rod connection to load, extra piston rod length over standard, etc., should be considered for thrust loads. Alloy steel mounting bolts are recommended for all mounting styles, and thrust keys are recommended for Styles C and F.

Double Rod End Cylinders

The piston connection to rod #1 (without 'V' notch) of 1.50"-8.00" bore double rod end heavy duty hydraulic cylinders is pre-stressed for maximum fatigue life. For this reason the load should always be attached to the rod without 'V' notch. Extension rod #2 with 'V' notch is threaded to rod #1 and is recommended for non-load bearing attachment only.

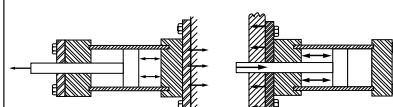

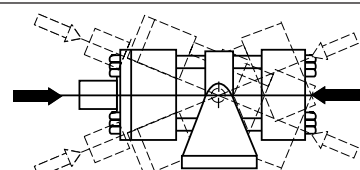

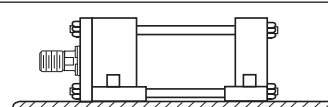

For thrust (compression) load applications where the mounting style end of a double rod end cylinder is opposite the rod connected to the load it should be specified as a cap mounting style. For example, a head trunnion mounting style opposite the rod connected to the load should be specified as DB. This will ensure that the rod end without 'V' notch will be oriented opposite the head trunnion end. See the table below for guidance in selecting mounting styles that fit this criteria.

Double Rod End Mounting Styles

Stop Tubing

Stop tube is recommended to lengthen the distance between the rod bearing and piston bearing to reduce bearing loads on long push stroke cylinders when the cylinder is fully extended. This is especially true of horizontally mounted cylinders. As part of the piston assembly and positioned between the piston and head, a stop tube restricts the extended position of the rod using the increased distance to achieve additional stability.

Use the following steps to determine the need for stop tube and, if required, how long it should be.

1. Examine the groups of cylinder illustrations below and determine which mounting and rod guiding group type match the required cylinder application.

2. Establish the Basic Length (L), with the piston rod fully extended, for the selected illustration by using the dimensional tables on previous pages of this catalog. For pivot mounted cylinders, the pin-to-pin dimension with the piston rod fully extended must be used. Regardless of mounting style, be sure to include any extended piston rod length beyond the catalog standard.
3. In the Stop Tube Table select the column for the appropriate mounting style and rod end guiding type. In the Basic Length (L) column, find the row with the range that includes the value calculated in Step 2. The next respective column to the right has the required length of stop tube.

Note: Mounting Styles BB, DB, H, HB, HH, SB and SE are mounted horizontally should also be checked for turning moments and loads between the rod bearing and piston to ensure they are not excessive. Weight of oil must be included in determining bearing loads.

When specifying cylinders with stop tube be sure to call out the net stroke and the length of the stop tube. Machine design can be continued without delay by laying in a cylinder equivalent in length to the NET STROKE PLUS STOP TUBE LENGTH, which is referred to as GROSS STROKE.

Stop Tube Length vs Basic Length (L)

Cylinder Mounting and Rod Guiding Groups

Piston Rod Diameter Selection

Long stroke cylinders that work on push with the piston rod loaded in compression should be checked, using the following steps, to ensure an appropriate piston rod diameter is specified.

1. First, determine whether stop tubing is required as described on the previous page.
2. Use the Basic Length (L) that was established for determining the stop tube length and then add the required stop tube length to the Basic Length to obtain an Adjusted Basic Length (L_A).
3. In the table below, for the mounting style and rod end guiding condition that will be used, find the row for the Bore and Rod combination that is required.
4. Follow the Bore and Rod row to the right and find the Operating Pressure column that is closest, but

exceeds the system pressure. The intersection of the Bore and Rod row and Operating Pressure column displays the maximum allowable L_A. If L_A in the table is greater than or equal to the calculated L_A, the rod diameter selected is satisfactory for the application.

5. If L_A in the table is less than the calculated Adjusted Basic Length move down the column to a rod diameter with an L_A that exceeds the requirement.
6. If the L_A specifies a rod diameter in a larger bore then restart the process of sizing the stop tube and re-check the rod diameter. Contact the factory if L_A exceeds 300 inches.

Note: Data in these tables assume standard rod extension (W or WF dimension) and standard rod end accessories. If different, consult factory.

Maximum Basic Lengths (L_A) (all dimensions in inches)

¹ Maximum operating pressure is limited for Mounting Style SB. Please refer to maximum operating pressure per bore in Pressure Ratings table located on the dimension page for Mounting Styles SB.

An Introduction to Cushioning

Cushioning is recommended as a means of controlling the deceleration of masses, or for applications where piston speed is in excess of 4 in/sec and the piston will make full stroke. Cushioning extends cylinder life and reduces undesirable noise and hydraulic shock. Built-in “cushions” are optional and can be supplied at the head and cap ends of a cylinder without affecting its envelope or mounting dimensions.

Standard Cushioning

Ideal cushion performance shows an almost uniform absorption of energy along the cushioning length, as shown. Many forms of cushioning exist, and each has its own specific merits and advantages.

In order to cover the majority of applications, 2H/3H cylinders are supplied with profiled cushioning as standard. Final speed may be adjusted using the cushion screw. The performance of profiled cushioning is indicated on the diagram, and

cushion performance for each of the rod sizes available is illustrated graphically in the charts on the following pages.

Note: Cushion performance will be affected by the use of water or high water based fluids. Please consult factory for details.

Cushion Length

Where specified, 2H/2HD/2HB and 3H/3HD/3HB cylinders incorporate the longest cushion sleeve and spear that can be accommodated within the standard envelope without reducing the rod bearing and piston bearing length. See cushion lengths on the next page. Cushions are adjustable via recessed needle valves.

Cushion Calculation

The charts on the cushion energy absorption capacity data page show the energy absorption capacity for each bore/rod combination at the head (annulus) and the cap (full bore) ends of cylinder. The charts are valid for piston velocities within a range of 0.33 to 1 ft/s. For velocities between 1ft/s and 1.64 ft/s the energy values derived from the charts should be reduced by 25%. For velocities less than 0.33 ft/s where large masses are involved, and for velocities greater than 1.60 ft/s, a special cushion profile may be required. Please consult the factory for details.

The cushion capacity of the head end is less than the cap, and reduces to zero at high drive pressures due to the pressure intensification effect across the piston.

The energy absorption capacity of the cushion decreases with drive pressure.

Formula

Cushioning calculations are based on the formula $E=(1/2)mv^2$ for horizontal applications. For inclined or vertically downward or upward applications, this is modified to:

$$E = (1/2)mv^2 + mg(L/12) \times \sin(a)$$

(for inclined or vertically downward direction of mass)

$$E = (1/2)mv^2 - mg(L/12) \times \sin(a)$$

(for inclined vertically upward direction of mass)

where:

E = energy absorbed in ft-lb

g = acceleration due to gravity = 32.2 ft/s²

v = velocity in ft/s

L = length of cushion in inches (see cushion length chart on the next page).

m = mass of load in slug (including piston, rod and rod end accessories).

a = angle to the horizontal in degrees

p = pressure in psi

Example:

The following example shows how to calculate the energy developed by masses moving in a straight line. For non-linear motion, other calculations are required; please consult the factory. The example assumes that the bore and rod diameter are already appropriate for the application. The effects of friction on the cylinder and load have been ignored.

Selected bore/rod 6.00" bore x 2.50" rod (No. 1 rod)

Cushion at the cap end.

Pressure = 2,500 psi

Mass = 685 slugs = weight in lb / (32.2 ft/s²)

Velocity = 1.3 ft/s

Cushion length = 1.313 inch

a = 45°

Sin (a) = 0.70

$$E = (1/2)mv^2 + mgl/12 \times \sin(a)$$

$$= (1/2) \times 685 \times 1.3^2 + 685 \times 32.2 \times 1.313/12 \times 0.70$$

$$= 2,268 \text{ ft-lb}$$

Note: In the above example velocity is greater than 1 ft/s Therefore, a de-rating factor of 0.75 must be applied to the calculated value of E. Applying this correction factor will increase the energy value to 3024 ft-lb (2268/0.75 = 3024 ft-lb). A review of the graph for the cap end cushion of a 6 inch bore x 2.50" rod cylinder operating at 2500 psi indicates that it can absorb approximately 3200 ft-lb maximum of energy. Since 3024 ft-lb is less than the maximum allowable of 3200 ft-lb, the cylinder can be applied as indicated. If the calculated energy exceeds the value shown on the curve, select a larger bore cylinder and/or reduce the operating pressure and recalculate the energy. Compare the newly calculated energy value to the appropriate curve to ensure it does not exceed the maximum allowable energy.

Cushion Length Chart (Series 2H/2HD/2HB & 3H/3HD/3HB Cylinders)

Safety Guide for Selecting and Using Hydraulic, Pneumatic Cylinders and Their Accessories

WARNING: ⚠ FAILURE OF THE CYLINDER, ITS PARTS, ITS MOUNTING, ITS CONNECTIONS TO OTHER OBJECTS, OR ITS CONTROLS CAN RESULT IN:

- Unanticipated or uncontrolled movement of the cylinder or objects connected to it.
- Falling of the cylinder or objects held up by it.
- Fluid escaping from the cylinder, potentially at high velocity.

THESE EVENTS COULD CAUSE DEATH OR PERSONAL INJURY BY, FOR EXAMPLE, PERSONS FALLING FROM HIGH LOCATIONS, BEING CRUSHED OR STRUCK BY HEAVY OR FAST MOVING OBJECTS, BEING PUSHED INTO DANGEROUS EQUIPMENT OR SITUATIONS, OR SLIPPING ON ESCAPED FLUID.

Before selecting or using Parker Hannifin Corporation (the Company) cylinders or related accessories, it is important that you read, understand and follow the following safety information. Training is advised before selecting and using the Company's products.

1.0 General Instructions

1.1 Scope – This safety guide provides instructions for selecting and using (including assembling, installing, and maintaining) cylinder products. This safety guide is a supplement to and is to be used with the specific Company publications for the specific cylinder products that are being considered for use.

1.2 Fail Safe – Cylinder products can and do fail without warning for many reasons. All systems and equipment should be designed in a fail-safe mode so that if the failure of a cylinder product occurs people and property won't be endangered.

1.3 Distribution – Provide a free copy of this safety guide to each person responsible for selecting or using cylinder products. Do not select or use the Company's cylinders without thoroughly reading and understanding this safety guide as well as the specific Company publications for the products considered or selected.

1.4 User Responsibility – Due to very wide variety of cylinder applications and cylinder operating conditions, the Company does not warrant that any particular cylinder is suitable for any specific application. This safety guide does not analyze all technical parameters that must be considered in selecting a product. The hydraulic and pneumatic cylinders outlined in this catalog are designed to the Company's design guidelines and do not necessarily meet the design guideline of other agencies such as American Bureau of Shipping, ASME Pressure Vessel Code etc. The user, through its own analysis and testing, is solely responsible for:

- Making the final selection of the cylinders and related accessories.
- Determining if the cylinders are required to meet specific design requirements as required by the Agency(s) or industry standards covering the design of the user's equipment.
- Assuring that the user's requirements are met, OSHA requirements are met, and safety guidelines from the applicable agencies such as but not limited to ANSI are followed and that the use presents no health or safety hazards.
- Providing all appropriate health and safety warnings on the equipment on which the cylinders are used.

1.5 Additional Questions – Call the appropriate Company technical service department if you have any questions or require any additional information. See the Company publication for the product being considered or used, or call 1-847-298-2400, or go to www.parker.com, for telephone numbers of the appropriate technical service department.

2.0 Cylinder and Accessories Selection

2.1 Seals – Part of the process of selecting a cylinder is the selection of seal compounds. Before making this selection, consult the "seal information page(s)" of the publication for the series of cylinders of interest.

The application of cylinders may allow fluids such as cutting fluids, wash down fluids etc. to come in contact with the external area of the cylinder. These fluids may attack the piston rod wiper and or the primary seal and must be taken into account when selecting and specifying seal compounds.

Dynamic seals will wear. The rate of wear will depend on many operating factors. Wear can be rapid if a cylinder is mis-aligned or if the cylinder has been improperly serviced. The user must take seal wear into consideration in the application of cylinders.

2.2 Piston Rods – Possible consequences of piston rod failure or separation of the piston rod from the piston include, but are not limited to are:

- Piston rod and or attached load thrown off at high speed.
- High velocity fluid discharge.
- Piston rod extending when pressure is applied in the piston retract mode.

Piston rods or machine members attached to the piston rod may move suddenly and without warning as a consequence of other conditions occurring to the machine such as, but not limited to:

- Unexpected detachment of the machine member from the piston rod.

- Failure of the pressurized fluid delivery system (hoses, fittings, valves, pumps, compressors) which maintain cylinder position.
- Catastrophic cylinder seal failure leading to sudden loss of pressurized fluid.
- Failure of the machine control system.

Follow the recommendations of the "Piston Rod Selection Chart and Data" in the publication for the series of cylinders of interest. The suggested piston rod diameter in these charts must be followed in order to avoid piston rod buckling.

Piston rods are not normally designed to absorb bending moments or loads which are perpendicular to the axis of piston rod motion. These additional loads can cause the piston rod to fail. If these types of additional loads are expected to be imposed on the piston rod, their magnitude should be made known to our engineering department.

The cylinder user should always make sure that the piston rod is securely attached to the machine member.

On occasion cylinders are ordered with double rods (a piston rod extended from both ends of the cylinder). In some cases a stop is threaded on to one of the piston rods and used as an external stroke adjuster. On occasions spacers are attached to the machine member connected to the piston rod and also used as a stroke adjuster. In both cases the stops will create a pinch point and the user should consider appropriate use of guards. If these external stops are not perpendicular to the mating contact surface, or if debris is trapped between the contact surfaces, a bending moment will be placed on the piston rod, which can lead to piston rod failure. An external stop will also negate the effect of cushioning and will subject the piston rod to impact loading. Those two (2) conditions can cause piston rod failure. Internal stroke adjusters are available with and without cushions. The use of external stroke adjusters should be reviewed with our engineering department.

The piston rod to piston and the stud to piston rod threaded connections are secured with an anaerobic adhesive. The strength of the adhesive decreases with increasing temperature. Cylinders which can be exposed to temperatures above +250°F (+121°C) are to be ordered with a non studded piston rod and a pinned piston to rod joint.

2.3 Cushions – Cushions should be considered for cylinder applications when the piston velocity is expected to be over 4 inches/second.

Cylinder cushions are normally designed to absorb the energy of a linear applied load. A rotating mass has considerably more energy than the same mass moving in a linear mode. Cushioning for a rotating mass application should be reviewed by our engineering department.

2.4 Cylinder Mountings – Some cylinder mounting configurations may have certain limitations such as but not limited to minimum stroke for side or foot mounting cylinders or pressure de-ratings for certain mounts. Carefully review the catalog for these types of restrictions.

Always mount cylinders using the largest possible high tensile alloy steel socket head cap screws that can fit in the cylinder mounting holes and torque them to the manufacturer's recommendations for their size.

2.5 Port Fittings – Hydraulic cylinders applied with meter out or deceleration circuits are subject to intensified pressure at piston rod end.

The rod end pressure is approximately equal to:

$$\frac{\text{operating pressure} \times \text{effective cap end area}}{\text{effective rod end piston area}}$$

Contact your connector supplier for the pressure rating of individual connectors.

3.0 Cylinder and Accessories Installation and Mounting

3.1 Installation

3.1.1 – Cleanliness is an important consideration, and cylinders are shipped with the ports plugged to protect them from contaminants entering the ports. These plugs should not be removed until the piping is to be installed. Before making the connection to the cylinder ports, piping should be thoroughly cleaned to remove all chips or burrs which might have resulted from threading or flaring operations.

3.1.2 – Cylinders operating in an environment where air drying materials are present such as fast-drying chemicals, paint, or weld splatter, or other hazardous conditions such as excessive heat, should have shields installed to prevent damage to the piston rod and piston rod seals.

3.1.3 – Proper alignment of the cylinder piston rod and its mating component on the machine should be checked in both the extended and retracted positions. Improper alignment will result in excessive rod gland and/or cylinder bore wear. On fixed mounting cylinders attaching the piston rod while the rod is retracted will help in achieving proper alignment.

3.1.4 – Sometimes it may be necessary to rotate the piston rod in order to thread the piston rod into the machine member. This operation must always be done with zero pressure being applied to either side of the piston. Failure to follow this procedure may result in loosening the piston to rod-threaded connection. In some rare cases the turning of the piston rod may rotate a threaded piston rod gland and loosen it from the cylinder head. Confirm that this condition is not occurring. If it does, re-tighten the piston rod gland firmly against the cylinder head.

For double rod cylinders it is also important that when attaching or detaching the piston rod from the machine member that the torque be applied to the piston rod end of the cylinder that is directly attaching to the machine member with the opposite end unrestrained. If the design of the machine is such that only the rod end of the cylinder opposite to where the rod attaches to the machine member can be rotated, consult the factory for further instructions.

3.2 Mounting Recommendations

3.2.1 – Always mount cylinders using the largest possible high tensile alloy steel socket head screws that can fit in the cylinder mounting holes and torque them to the manufacturer's recommendations for their size.

3.2.2 – Side-Mounted Cylinders – In addition to the mounting bolts, cylinders of this type should be equipped with thrust keys or dowel pins located so as to resist the major load.

3.2.3 – Tie Rod Mounting – Cylinders with tie rod mountings are recommended for applications where mounting space is limited. The standard tie rod extension is shown as BB in dimension tables. Longer or shorter extensions can be supplied. Nuts used for this mounting style should be torqued to the same value as the tie rods for that bore size.

3.2.4 – Flange Mount Cylinders – The controlled diameter of the rod gland extension on head end flange mount cylinders can be used as a pilot to locate the cylinders in relation to the machine. After alignment has been obtained, the flanges may be drilled for pins or dowels to prevent shifting.

3.2.5 – Trunnion Mountings – Cylinders require lubricated bearing blocks with minimum bearing clearances. Bearing blocks should be carefully aligned and rigidly mounted so the trunnions will not be subjected to bending moments. The rod end should also be pivoted with the pivot pin in line and parallel to axis of the trunnion pins.

3.2.6 – Clevis Mountings – Cylinders should be pivoted at both ends with centerline of pins parallel to each other. After cylinder is mounted, be sure to check to assure that the cylinder is free to swing through its working arc without interference from other machine parts.

4.0 Cylinder and Accessories Maintenance, Troubleshooting and Replacement

4.1 Storage – At times cylinders are delivered before a customer is ready to install them and must be stored for a period of time. When storage is required the following procedures are recommended.

4.1.1 – Store the cylinders in an indoor area which has a dry, clean and noncorrosive atmosphere. Take care to protect the cylinder from both internal corrosion and external damage.

4.1.2 – Whenever possible cylinders should be stored in a vertical position (piston rod up). This will minimize corrosion due to possible condensation which could occur inside the cylinder. This will also minimize seal damage.

4.1.3 – Port protector plugs should be left in the cylinder until the time of installation.

4.1.4 – If a cylinder is stored full of hydraulic fluid, expansion of the fluid due to temperature changes must be considered. Installing a check valve with free flow out of the cylinder is one method.

4.1.5 – When cylinders are mounted on equipment that is stored outside for extended periods, exposed unpainted surfaces, e.g. piston rod, must be coated with a rust-inhibiting compound to prevent corrosion.

4.2 Cylinder Trouble Shooting

4.2.1 – External Leakage

4.2.1.1 – Rod seal leakage can generally be traced to worn or damaged seals. Examine the piston rod for dents, gouges or score marks, and replace piston rod if surface is rough.

Rod seal leakage could also be traced to gland wear. If clearance is excessive, replace rod bushing and seal. Rod seal leakage can also be traced to seal deterioration. If seals are soft or gummy or brittle, check compatibility of seal material with lubricant used if air cylinder, or operating fluid if hydraulic cylinder. Replace with seal material, which is compatible with these fluids. If the seals are hard or have lost elasticity, it is usually due to exposure to temperatures in excess of 165°F. (+74°C). Shield the cylinder from the heat source to limit temperature to 350°F. (+177°C.) and replace with fluorocarbon seals.

4.2.1.2 – Cylinder body seal leak can generally be traced to loose tie rods. Torque the tie rods to manufacturer's recommendation for that bore size.

Excessive pressure can also result in cylinder body seal leak. Determine maximum pressure to rated limits. Replace seals and retorque tie rods as in paragraph above. Excessive pressure can also result in cylinder body seal leak. Determine if the pressure rating of the cylinder has been exceeded. If so, bring the operating pressure down to the rating of the cylinder and have the tie rods replaced.

Pinched or extruded cylinder body seal will also result in a leak. Replace cylinder body seal and retorque as in paragraph above.

Cylinder body seal leakage due to loss of radial squeeze which shows up in the form of flat spots or due to wear on the O.D. or I.D. – Either of these are symptoms of normal wear due to high cycle rate or length of service. Replace seals as per paragraph above.

4.2.2 – Internal Leakage

4.2.2.1 – Piston seal leak (by-pass) 1 to 3 cubic inches per minute leakage is considered normal for piston ring construction. Virtually no static leak with lipseal type seals on piston should be expected. Piston seal wear is a usual cause of piston seal leakage. Replace seals as required.

4.2.2.2 – With lipseal type piston seals excessive back pressure due to over-adjustment of speed control valves could be a direct cause of rapid seal wear. Contamination in a hydraulic system can result in a scored cylinder bore, resulting in rapid seal wear. In either case, replace piston seals as required.

4.2.2.3 – What appears to be piston seal leak, evidenced by the fact that the cylinder drifts, is not always traceable to the piston. To make sure, it is suggested that one side of the cylinder piston be pressurized and the fluid line at the opposite port be disconnected. Observe leakage. If none is evident, seek the cause of cylinder drift in other component parts in the circuit.

4.2.3 – Cylinder Fails to Move the Load

4.2.3.1 – Pneumatic or hydraulic pressure is too low. Check the pressure at the cylinder to make sure it is to circuit requirements.

4.2.3.2 – Piston Seal Leak – Operate the valve to cycle the cylinder and observe fluid flow at valve exhaust ports at end of cylinder stroke. Replace piston seals if flow is excessive.

4.2.3.3 – Cylinder is undersized for the load – Replace cylinder with one of a larger bore size.

4.3 Erratic or Chatter Operation

4.3.1 – Excessive friction at rod gland or piston bearing due to load misalignment – Correct cylinder-to-load alignment.

4.3.2 – Cylinder sized too close to load requirements – Reduce load or install larger cylinder.

4.3.3 – Erratic operation could be traced to the difference between static and kinetic friction. Install speed control valves to provide a back pressure to control the stroke.

4.4 Cylinder Modifications, Repairs, or Failed Component – Cylinders as shipped from the factory are not to be disassembled and or modified. If cylinders require modifications, these modifications must be done at company locations or by the Company's certified facilities. The Cylinder Division Engineering Department must be notified in the event of a mechanical fracture or permanent deformation of any cylinder component (excluding seals). This includes a broken piston rod, tie rod, mounting accessory or any other cylinder component. The notification should include all operation and application details. This information will be used to provide an engineered repair that will prevent recurrence of the failure.

It is allowed to disassemble cylinders for the purpose of replacing seals or seal assemblies. However, this work must be done by strictly following all the instructions provided with the seal kits.

Offer of Sale

The items described in this document and other documents and descriptions provided by Parker Hannifin Corporation, its subsidiaries and its authorized distributors ("Seller") are hereby offered for sale at prices to be established by Seller. This offer and its acceptance by any customer ("Buyer") shall be governed by all of the following Terms and Conditions. Buyer's order for any item described in its document, when communicated to Seller verbally, or in writing, shall constitute acceptance of this offer. All goods, services or work described will be referred to as "Products".

1. Terms and Conditions. Seller's willingness to offer Products, or accept an order for Products, to or from Buyer is subject to these Terms and Conditions or any newer version of the terms and conditions found on-line at www.parker.com/saleterms/. Seller objects to any contrary or additional terms or conditions of Buyer's order or any other document issued by Buyer.

2. Price Adjustments; Payments. Prices stated on Seller's quote or other documentation offered by Seller are valid for 30 days, and do not include any sales, use, or other taxes unless specifically stated. Unless otherwise specified by Seller, all prices are F.C.A. Seller's facility (INCOTERMS 2010). Payment is subject to credit approval and is due 30 days from the date of invoice or such other term as required by Seller's Credit Department, after which Buyer shall pay interest on any unpaid invoices at the rate of 1.5% per month or the maximum allowable rate under applicable law.

3. Delivery Dates; Title and Risk; Shipment. All delivery dates are approximate and Seller shall not be responsible for any damages resulting from any delay. Regardless of the manner of shipment, title to any products and risk of loss or damage shall pass to Buyer upon placement of the products with the shipment carrier at Seller's facility. Unless otherwise stated, Seller may exercise its judgment in choosing the carrier and means of delivery. No deferral of shipment at Buyer's request beyond the respective dates indicated will be made except on terms that will indemnify, defend and hold Seller harmless against all loss and additional expense. Buyer shall be responsible for any additional shipping charges incurred by Seller due to Buyer's acts or omissions.

4. Warranty. Seller warrants that the Products sold hereunder shall be free from defects in material or workmanship for a period of eighteen months from the date of delivery to Buyer. The prices charged for Seller's products are based upon the exclusive limited warranty stated above, and upon the following disclaimer: **DISCLAIMER OF WARRANTY: THIS WARRANTY COMPRISES THE SOLE AND ENTIRE WARRANTY PERTAINING TO PRODUCTS PROVIDED HEREUNDER. SELLER DISCLAIMS ALL OTHER WARRANTIES, EXPRESS AND IMPLIED, INCLUDING DESIGN, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.**

5. Claims; Commencement of Actions. Buyer shall promptly inspect all Products upon delivery. No claims for shortages will be allowed unless reported to the Seller within 10 days of delivery. No other claims against Seller will be allowed unless asserted in writing within 30 days after delivery. Buyer shall notify Seller of any alleged breach of warranty within 30 days after the date the defect is or should have been discovered by Buyer. Any action based upon breach of this agreement or upon any other claim arising out of this sale (other than an action by Seller for an amount due on any invoice) must be commenced within 12 months from the date of the breach without regard to the date breach is discovered.

6. LIMITATION OF LIABILITY. UPON NOTIFICATION, SELLER WILL, AT ITS OPTION, REPAIR OR REPLACE A DEFECTIVE PRODUCT, OR REFUND THE PURCHASE PRICE. **IN NO EVENT SHALL SELLER BE LIABLE TO BUYER FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF, OR AS THE RESULT OF, THE SALE, DELIVERY, NON-DELIVERY, SERVICING, USE OR LOSS OF USE OF THE PRODUCTS OR ANY PART THEREOF, OR FOR ANY CHARGES OR EXPENSES OF ANY NATURE INCURRED WITHOUT SELLER'S WRITTEN CONSENT, EVEN IF SELLER HAS BEEN NEGLIGENT, WHETHER IN CONTRACT, TORT OR OTHER LEGAL THEORY. IN NO EVENT SHALL SELLER'S LIABILITY UNDER ANY CLAIM MADE BY BUYER EXCEED THE PURCHASE PRICE OF THE PRODUCTS.**

7. User Responsibility. The user, through its own analysis and testing, is solely responsible for making the final selection of the system and Product and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application and follow applicable industry standards and Product information. If Seller provides Product or system options, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the Products or systems.

8. Loss to Buyer's Property. Any designs, tools, patterns, materials, drawings, confidential information or equipment furnished by Buyer or any other items which become Buyer's property, will be considered obsolete and may be destroyed by Seller after two consecutive years have elapsed without Buyer ordering the items manufactured using such property. Seller shall not be responsible for any loss or damage to such property while it is in Seller's possession or control.

9. Special Tooling. A tooling charge may be imposed for any special tooling, including without limitation, dies, fixtures, molds and patterns, acquired to manufacture Products. Such special tooling shall be and remain Seller's property notwithstanding payment of any charges by Buyer. In no event will Buyer acquire any interest in apparatus belonging to Seller which is utilized in the manufacture of the Products, even if such apparatus has been specially converted or adapted for such manufacture and notwithstanding any charges paid by Buyer. Unless otherwise agreed, Seller shall have the right to alter, discard or otherwise dispose of any special tooling or other property in its sole discretion at any time.

10. Buyer's Obligation; Rights of Seller. To secure payment of all sums due or otherwise, Seller shall retain a security interest in the goods delivered and this agreement shall be deemed a Security Agreement under the Uniform Commercial Code. Buyer authorizes Seller as its attorney to execute and file on Buyer's behalf all documents Seller deems necessary to perfect its security interest.

11. Improper use and Indemnity. Buyer shall indemnify, defend, and hold Seller harmless from any claim, liability, damages, lawsuits, and costs (including attorney fees), whether for personal injury, property damage, patent, trademark or copyright

infringement or any other claim, brought by or incurred by Buyer, Buyer's employees, or any other person, arising out of: (a) improper selection, improper application or other misuse of Products purchased by Buyer from Seller; (b) any act or omission, negligent or otherwise, of Buyer; (c) Seller's use of patterns, plans, drawings, or specifications furnished by Buyer to manufacture Product; or (d) Buyer's failure to comply with these terms and conditions. Seller shall not indemnify Buyer under any circumstance except as otherwise provided.

12. Cancellations and Changes. Orders shall not be subject to cancellation or change by Buyer for any reason, except with Seller's written consent and upon terms that will indemnify, defend and hold Seller harmless against all direct, incidental and consequential loss or damage. Seller may change product features, specifications, designs and availability with notice to Buyer.

13. Limitation on Assignment. Buyer may not assign its rights or obligations under this agreement without the prior written consent of Seller.

14. Force Majeure. Seller does not assume the risk and shall not be liable for delay or failure to perform any of Seller's obligations by reason of circumstances beyond the reasonable control of Seller (hereinafter "Events of Force Majeure"). Events of Force Majeure shall include without limitation: accidents, strikes or labor disputes, acts of any government or government agency, acts of nature, delays or failures in delivery from carriers or suppliers, shortages of materials, or any other cause beyond Seller's reasonable control.

15. Waiver and Severability. Failure to enforce any provision of this agreement will not waive that provision nor will any such failure prejudice Seller's right to enforce that provision in the future. Invalidation of any provision of this agreement by legislation or other rule of law shall not invalidate any other provision herein. The remaining provisions of this agreement will remain in full force and effect.

16. Termination. Seller may terminate this agreement for any reason and at any time by giving Buyer thirty (30) days written notice of termination. Seller may immediately terminate this agreement, in writing, if Buyer: (a) commits a breach of any provision of this agreement (b) appointments a trustee, receiver or custodian for all or any part of Buyer's property (c) files a petition for relief in bankruptcy on its own behalf, or by a third party (d) makes an assignment for the benefit of creditors, or (e) dissolves or liquidates all or a majority of its assets.

17. Governing Law. This agreement and the sale and delivery of all Products hereunder shall be deemed to have taken place in and shall be governed and construed in accordance with the laws of the State of Ohio, as applicable to contracts executed and wholly performed therein and without regard to conflicts of laws principles. Buyer irrevocably agrees and consents to the exclusive jurisdiction and venue of the courts of Cuyahoga County, Ohio with respect to any dispute, controversy or claim arising out of or relating to this agreement.

18. Indemnity for Infringement of Intellectual Property Rights. Seller shall have no liability for infringement of any patents, trademarks, copyrights, trade dress, trade secrets or similar rights except as provided in this Section. Seller will defend and indemnify Buyer against allegations of infringement of U.S. patents, U.S. trademarks, copyrights, trade dress and trade secrets ("Intellectual Property Rights"). Seller will defend at its expense and will pay the cost of any settlement or damages awarded in an action brought against Buyer based on an allegation that a Product sold pursuant to this Agreement infringes the Intellectual Property Rights of a third party. Seller's obligation to defend and indemnify Buyer is contingent on Buyer notifying Seller within ten (10) days after Buyer becomes aware of such allegations of infringement, and Seller having sole control over the defense of any allegations or actions including all negotiations for settlement or compromise. If a Product is subject to a claim that it infringes the Intellectual Property Rights of a third party, Seller may, at its sole expense and option, procure for Buyer the right to continue using the Product, replace or modify the Product so as to make it noninfringing, or offer to accept return of the Product and return the purchase price less a reasonable allowance for depreciation. Notwithstanding the foregoing, Seller shall have no liability for claims of infringement based on information provided by Buyer, or directed to Products delivered hereunder for which the designs are specified in whole or part by Buyer, or infringements resulting from the modification, combination or use in a system of any Product sold hereunder. The foregoing provisions of this Section shall constitute Seller's sole and exclusive liability and Buyer's sole and exclusive remedy for infringement of Intellectual Property Rights.

19. Entire Agreement. This agreement contains the entire agreement between the Buyer and Seller and constitutes the final, complete and exclusive expression of the terms of sale. All prior or contemporaneous written or oral agreements or negotiations with respect to the subject matter are herein merged.

20. Compliance with Law, U. K. Bribery Act and U.S. Foreign Corrupt Practices Act. Buyer agrees to comply with all applicable laws and regulations, including both those of the United Kingdom and the United States of America, and of the country or countries of the Territory in which Buyer may operate, including without limitation the U. K. Bribery Act, the U.S. Foreign Corrupt Practices Act ("FCPA") and the U.S. Anti-Kickback Act (the "Anti-Kickback Act"), and agrees to indemnify and hold harmless Seller from the consequences of any violation of such provisions by Buyer, its employees or agents. Buyer acknowledges that they are familiar with the provisions of the U. K. Bribery Act, the FCPA and the Anti-Kickback Act, and certifies that Buyer will adhere to the requirements thereof. In particular, Buyer represents and agrees that Buyer shall not make any payment or give anything of value, directly or indirectly to any governmental official, any foreign political party or official thereof, any candidate for foreign political office, or any commercial entity or person, for the purpose of influencing such person to purchase products or otherwise benefit the business of Seller.

Parker's Motion & Control Technologies

At Parker, we're guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further info call 1 800 C-Parker (1 800 272 7537)
